

Strengthening Ties Today, Inspiring Generations Tomorrow.

Confidential and Proprietary
August 2026

FOREWORD

India and Kenya share a longstanding relationship founded on mutual respect, historical ties, and a shared commitment to economic growth and sustainable development. Over the years, this partnership has evolved into a dynamic collaboration spanning trade, investment, agriculture, healthcare, infrastructure, technology, education, and capacity building. As both nations continue to strengthen their economic engagement, deeper institutional collaboration between governments, industry, academia, investors, and development partners has become increasingly important in unlocking new opportunities and fostering inclusive growth.

The Chamber of Commerce and Industry of India (CCI India) remains committed to advancing this partnership by serving as a catalyst for trade facilitation, investment promotion, business networking, innovation, entrepreneurship, and international collaboration. Through strategic initiatives, business delegations, policy dialogue, and sector-specific engagement, CCI India continues to build meaningful connections between Indian and Kenyan stakeholders, enabling partnerships that contribute to sustainable economic development and shared prosperity.

It also examines the challenges and opportunities across major sectors of the Kenyan economy while identifying practical avenues through which Indian enterprises and institutions can contribute. Particular emphasis has been placed on the strategic role of CCI India in facilitating business partnerships, promoting technology transfer, encouraging investment, supporting MSMEs and startups, strengthening institutional cooperation, and fostering long-term economic engagement between the two countries.

The publication is intended to serve as a valuable reference for policymakers, government officials, diplomatic missions, industry leaders, investors, entrepreneurs, academic institutions, development organizations, and business communities in both India and Kenya. By encouraging informed dialogue, knowledge sharing, and collaborative action, it seeks to support initiatives that enhance bilateral trade, generate investment, create employment opportunities, strengthen institutional partnerships, and contribute to sustainable socio-economic development.

KENYA

“ Discover wildlife and innovation, where nature and modernity coexist.

Introduction

Kenya is one of the most important economic and political hubs of East Africa, with its capital at Nairobi. It serves as the regional headquarters for many international organizations and multinational companies operating in Africa.

India and Kenya share long-standing historical, commercial and cultural ties, and India maintains a High Commission in Nairobi, which plays a key role in strengthening bilateral relations.

Basic Facts

Kenya's capital city is Nairobi and it operates under a democratic political system. It is a member of major regional economic groupings such as the East African Community (EAC), COMESA and the African Union. Kenya is regarded as one of Africa's most diversified economies with strong presence in agriculture, services, manufacturing and financial sectors.

Population & Currency

Kenya has a population of approximately 55 million people as of 2024. It is one of the most populous countries in East Africa and has a young and rapidly growing population. This large population provides a strong domestic consumer base and a growing labor force, making Kenya an attractive market for foreign investors and trading partners like India. The official currency of Kenya is the Kenyan Shilling (KES). The shilling is actively traded in the East African region and plays a key role in regional trade and financial transactions.

GDP (Gross Domestic Product)

Kenya's nominal GDP is estimated to be around US\$ 135–140 billion, making it the largest economy in East Africa. It also has one of the highest GDP per capita levels in the region. The country's consistent economic growth has been driven by strong performance in services, agriculture, infrastructure development and financial sectors.

“ Culture & Heritage

Kenya, located in East Africa, is known for its rich cultural diversity, vibrant traditions, and deep-rooted heritage shaped by numerous ethnic communities. Its culture reflects a blend of indigenous African traditions, Arab and Swahili influences, and colonial history, making it one of the most culturally dynamic countries in the region.

Strategic Importance & Key Observations

Kenya is a gateway economy for East Africa and acts as a launching point for Indian companies entering African markets. Its strong logistics network, ports (especially Mombasa), financial system and regional influence make it a strategically important partner for India. With Kenya focusing on infrastructure development, manufacturing growth, renewable energy and digital transformation, there are immense opportunities for Indian investment and trade expansion in the coming years. Kenya will continue to remain one of India's most important economic partners in East Africa.

Import & Export from India

India exports a wide range of products to Kenya including pharmaceuticals, motor vehicles, machinery, iron and steel products, petroleum products, refined petroleum, plastics, textiles, and chemicals. Indian pharmaceutical products dominate a significant portion of Kenya's medicine market. On the import side, India mainly imports tea, coffee, pulses, leather, vegetables, and soda ash from Kenya. Tea is the single most important Kenyan export to India.

Trade with India (Bilateral Trade – in Billions)

India is one of Kenya's largest trading partners. Bilateral trade between India and Kenya reached US\$ 4.31 billion in FY 2025–26, up nearly 25% from US\$ 3.45 billion in FY 2024–25. India's exports to Kenya account for the vast majority of this trade (over US\$ 3 billion), while Kenya's exports to India remain comparatively small (under US\$ 200 million), keeping the trade balance strongly in India's favor.

Economy

Kenya has a diversified economy with strong contributions from agriculture, services, manufacturing, tourism, information technology and financial services. Agriculture remains a key pillar of the economy and contributes significantly to employment and exports, with major products including tea, coffee, flowers and vegetables. The services sector, especially banking, telecommunications and tourism, contributes the largest share to GDP. Manufacturing, construction and infrastructure development have also expanded rapidly in recent years. Kenya is widely considered the commercial and financial hub of East Africa.

1.India–Kenya Bilateral Relations

Historical and Diplomatic Relations

India and Kenya established diplomatic relations shortly after Kenya's independence in 1963, building on a relationship that predates independence through the Indian diaspora's long presence in East Africa and India's political support for Kenya's liberation movement. India's High Commission in Nairobi and Kenya's High Commission in New Delhi (established 1969) have anchored an active diplomatic relationship, reflected in regular head-of-state and ministerial exchanges, defence-cooperation engagements (including port calls by Indian Naval Ships such as INS Trikan in Mombasa), and cultural-diplomacy initiatives such as the High Commission of India's 2026 'Ek Ped Maa Ke Naam' tree-planting campaign in Kenya.

Kenya's High Commission in New Delhi is headed by H.E. Amb. Peter Munyiri, whose mission is mandated to project, promote and protect Kenya's interests in India in line with Kenya Vision 2030 and the Bottom-Up Economic Transformation Agenda (BETA).

Political Cooperation

Both countries are active members of the Commonwealth and cooperate closely in multilateral fora including the United Nations, the G20 (of which India held the 2023 presidency, with African Union membership a key legacy outcome championed by India), and UN-Habitat and UNEP, both headquartered in Nairobi, where India's High Commissioner also serves as Permanent Representative. Kenya has been a consistent partner for India's African engagement, including through India's ITEC (Indian Technical and Economic Cooperation) programme, the Pan-African e-Network, and India's development partnership model of concessional Lines of Credit.

Trade Relations

India is among Kenya's top trading partners globally and one of its top two or three source markets for imports, alongside China and the UAE. Total bilateral trade reached USD 4.31 billion in FY 2025–26, up from USD 3.45 billion in FY 2024–25 a 24.91% year-on-year increase confirmed at the 10th India–Kenya Joint Trade Committee session in Nairobi (27–28 April 2026). India maintains a substantial trade surplus, driven by exports of refined petroleum products, pharmaceuticals, engineering goods, machinery and agricultural commodities, while Kenya's exports to India are concentrated in tea, coffee, soda ash and minerals an imbalance that featured prominently in the JTC discussions and in ongoing Free Trade Agreement (FTA) exploratory talks.

Indicator	Value
Total India–Kenya bilateral trade, FY 2025–26	USD 4.31 billion
Total India–Kenya bilateral trade, FY 2024–25	USD 3.45 billion
Year-on-year growth	24.91%

Trade balance	In India's favour (India is a net exporter to Kenya)
Kenya's principal exports to India	Tea, coffee, soda ash, minerals
India's principal exports to Kenya	Refined petroleum, pharmaceuticals, engineering goods, machinery, agricultural commodities
Governing bilateral mechanism	India–Kenya Joint Trade Committee (JTC) 10th session held Nairobi, 27–28 April 2026

Investment Relations

India is consistently ranked among the top three to five sources of foreign direct investment into Kenya, with a cumulative investment stock spanning manufacturing, pharmaceuticals, banking, IT/ITES, agro-processing and hospitality. The Indian-origin business community, present in Kenya for over a century, remains one of the most significant private-sector investor cohorts in the country, spanning both long-established conglomerates and newer first-generation entrepreneurial ventures.

Development Cooperation

- Lines of Credit extended by India's Exim Bank for Kenyan infrastructure, agriculture-mechanisation and water-supply projects.
- ITEC scholarships and training slots for Kenyan civil servants and professionals across agriculture, IT, banking and public administration.
- Grant assistance and capacity-building, including health-sector cooperation such as cancer-care equipment donations in earlier years and continuing medical/pharmaceutical partnerships.
- Cultural and people-to-people cooperation via the Indian Council for Cultural Relations (ICCR) and diaspora engagement.

Existing Agreements and Institutional Mechanisms

- India–Kenya Joint Trade Committee (JTC) the principal bilateral trade-policy mechanism; 10th session held April 2026 in Nairobi.
- MoU between the Bureau of Indian Standards (BIS) and the Kenya Bureau of Standards (KEBS) on standardisation and conformity-assessment cooperation.
- MoU between India's Central Board of Indirect Taxes and Customs (CBIC) and the Kenya Revenue Authority (KRA) for exchange of pre-arrival customs information, signed 27 April 2026.
- MoU between the Confederation of Indian Industry (CII) and the India Kenya Chamber of Commerce and Industry to promote trade, investment and industry collaboration, signed alongside the 10th JTC.

- Framework discussions on Kenya's participation in the International Solar Alliance (ISA), and on Special Rupee Vostro Account (SRVA)-based local-currency trade settlement, with Kenyan banks having already opened SRVAs with Indian banks.
- Ongoing exploratory discussions toward a bilateral Free Trade Agreement (FTA), aimed at addressing the trade-balance asymmetry and widening Kenyan market access to India.

Strategic Importance

Kenya's position as the economic and logistics anchor of the East African Community, its Indian Ocean coastline, and its role as a gateway to a combined EAC/COMESA/AfCFTA market of several hundred million consumers make it strategically significant for India's 'Africa outreach' and its broader Indo-Pacific and Indian Ocean Region (IOR) engagement. For Kenya, India offers an alternative and complementary source of capital, technology and affordable manufactured and pharmaceutical goods, reducing over-reliance on any single trading partner and supporting the diversification objectives embedded in Vision 2030 and BETA.

Future Outlook

The trajectory of the relationship 24.91% bilateral trade growth in FY 2025–26, active FTA exploratory talks, deepening digital-payments and local-currency-settlement cooperation, and Kenya's movement toward formalising ISA participation points toward a period of accelerated economic convergence. Institutional actors such as CCI India have a clear window to embed themselves as structural facilitators of this momentum, translating government-to-government goodwill into sustained business-to-business and business-to-government outcomes.

2. Kenya Country Profile

Geography

Kenya is located in East Africa, bordered by Ethiopia, Somalia, Tanzania, Uganda and South Sudan, with a coastline on the Indian Ocean. It spans approximately 580,000 square kilometres and encompasses diverse terrain the Great Rift Valley, the Central Highlands, the Lake Victoria basin, semi-arid northern rangelands, and the coastal belt anchored by the Port of Mombasa. Nairobi, the capital, is East Africa's principal financial, diplomatic and logistics hub and home to the UN Environment Programme (UNEP) and UN-Habitat headquarters.

Political Structure

Kenya is a presidential republic operating under a devolved system of governance established by the 2010 Constitution, comprising the national government and 47 county governments, each with elected governors and county assemblies. The bicameral Parliament comprises the National Assembly and the Senate. This devolved structure is highly relevant to investors and to CCI India's engagement strategy, as county

governments hold significant authority over land, local business licensing, and county-level infrastructure and agricultural investment.

Economy

Indicator	Value / Estimate (2025–26)
Nominal GDP	≈ USD 147 billion (2026 est., Wikipedia/national accounts compilation)
GDP (PPP)	≈ USD 430–574 billion (2026 est., differing methodologies IMF/World Bank vs. World Economics)
Real GDP growth	4.8–5.0% (2025); 4.6–4.9% projected (2026f) World Bank / AfDB
GDP per capita (nominal)	≈ USD 2,558 (2025) to USD 2,714 (2026 est.)
Inflation (CPI)	4.1% (2025 actual, AfDB); 4.3–5.9% projected range for 2026 across sources (AfDB, IMF, national estimates)
Fiscal deficit	Forecast to widen to ≈ 6.1% of GDP in 2026 (AfDB), against a 4.0% medium-term target
Population	≈ 55–58 million (2025–26 est.; sources range from 54.3 million (IMF) to 58.6 million (Worldometer) reflecting differing base data)
Sectoral GDP composition	Services ≈ 53%; Agriculture ≈ 29%; Industry ≈ 18% (latest available breakdown)
Poverty rate (international line)	≈ 41.9% projected for 2026 at the USD 3.00/day (2021 PPP) line World Bank

Trade Profile

- Total exports (goods): approximately USD 14 billion (recent-year estimate); principal exports tea, horticultural products (cut flowers, vegetables), coffee, petroleum products (re-exports), fish, cement, apparel.
- Total imports (goods): approximately USD 24 billion (recent-year estimate); principal imports machinery and transport equipment, petroleum, motor vehicles, iron and steel, plastics/resins.
- Key export markets: Uganda, Pakistan, United States (AGOA-linked apparel), Netherlands, United Kingdom.
- Key import sources: China, India, United Arab Emirates, Japan, Saudi Arabia with India among the top two to three import-source countries.

Human Capital and Literacy

Kenya's adult literacy rate exceeds 80%, among the higher rates in Sub-Saharan Africa, supported by historically strong investment in primary and secondary education and, more recently, the Competency-Based Curriculum (CBC) reform. The country has a young population median age below 20 years with roughly 800,000 new entrants to the labour force annually, underscoring both a demographic dividend opportunity and a pressing need for expanded skilling and job creation, particularly through TVET expansion and digital-economy employment.

Investment Climate

Kenya has historically ranked among Africa's more reform-oriented investment destinations, having implemented successive rounds of business-registration, tax-administration and cross-border-trade reforms. Key investment-facilitation institutions include the Kenya Investment Authority (KenInvest), the Nairobi International Financial Centre (NIFC) initiative, and Special Economic Zones under the SEZ Act. Continuing constraints include the cost of credit, currency-volatility exposure, and periodic policy or tax-regime unpredictability, which the government's ongoing fiscal-consolidation programme (including engagement with the IMF) seeks to address.

Natural Resources

- Arable and highland agricultural land supporting tea, coffee, horticulture and dairy production.
- Geothermal energy resources (Olkaria complex Africa's largest geothermal field) and strong wind and solar potential.
- Mineral resources including titanium-bearing mineral sands (Kwale), soda ash (Lake Magadi), fluorspar, and gemstones.
- Marine and freshwater resources across its Indian Ocean coastline and Lake Victoria basin.
- Wildlife and landscape assets underpinning a globally significant tourism industry.

SWOT Analysis: Kenya as an Investment Destination

Strengths	Weaknesses
Regional logistics & financial hub; EAC/COMESA/AfCFTA market access	High public debt and elevated cost of capital
Young, English-speaking, digitally literate workforce	Infrastructure gaps outside Nairobi–Mombasa corridor
Diversified economy; leading digital-finance ecosystem (M-Pesa)	Youth unemployment and skills mismatch
Political stability relative to regional peers; devolved governance	Currency volatility and periodic fiscal pressure

Opportunities	Threats
AfCFTA-enabled export platform; growing consumer middle class	Climate shocks recurrent drought/flood cycles
Renewable energy leadership (90%+ green grid) for green-FDI	Global commodity-price and interest-rate volatility
Digital Public Infrastructure convergence with India (UPI-model)	Regional security spillovers (Horn of Africa)
Deepening India–Kenya institutional trade architecture (JTC, FTA talks)	Political-cycle uncertainty ahead of 2027 elections

3.Embassy of Kenya

Overview

The High Commission of the Republic of Kenya in New Delhi, located at A15/14, Vasant Vihar, is Kenya's principal diplomatic mission in India, with concurrent accreditation covering Singapore, Sri Lanka and Bangladesh. Established in 1969, it is currently headed by H.E. Amb. Peter Munyiri, High Commissioner. The Mission's stated mandate is to project, promote and protect Kenya's interests in India and its countries of accreditation, in line with Kenya Vision 2030, the Bottom-Up Economic Transformation Agenda (BETA), and Kenya's fourth Medium-Term Plan.

Functions

- Diplomatic representation and political liaison with the Government of India and multilateral bodies headquartered in India.
- Trade and investment promotion, including facilitation of Kenyan exports to India and support for Indian investors seeking Kenyan market entry.
- Consular services for Kenyan nationals resident in or transiting India, Singapore, Sri Lanka and Bangladesh, including passport, eTA-related guidance for Indian travellers to Kenya, and document authentication/legalisation.
- Diaspora engagement and welfare, and promotion of Kenya's cultural profile in India.

Investment Promotion

Working alongside the Kenya Investment Authority (KenInvest), the High Commission serves as a key first point of contact for Indian investors exploring opportunities in Kenya. It provides sector-specific guidance, regulatory orientation, investment facilitation, and introductions to relevant national and county government authorities, while supporting business networking, policy engagement, and the identification of suitable investment and partnership opportunities across priority sectors

Future Priorities

- Supporting the conclusion of exploratory India–Kenya Free Trade Agreement discussions.
- Expanding direct flight connectivity and tourism-source-market development from India.
- Deepening cooperation on Digital Public Infrastructure, local-currency trade settlement (SRVA/LCS), and renewable energy under the International Solar Alliance framework.

4. Kenya Economic Landscape

Economic Structure

Kenya's economy is services-led (approximately 53% of GDP), with agriculture ($\approx 29\%$) and industry ($\approx 18\%$) forming the remaining structure. This services orientation – financial services, ICT, trade, tourism and transport/logistics distinguishes Kenya from many resource-dependent African economies and underpins its role as the region's commercial hub.

Services Sector

Financial services, telecommunications, real estate, and trade collectively anchor Kenya's services economy. Nairobi's status as a regional financial and corporate-headquarters hub home to numerous multinational regional offices, the Nairobi Securities Exchange, and a deep professional-services base is a structural competitive advantage relative to regional peers.

Agriculture

Agriculture remains the largest employer (an estimated 54% of the labour force) despite its smaller GDP share, and is the foundation of Kenya's principal export basket – tea, coffee, horticulture and cut flowers.

Manufacturing

Manufacturing contributes roughly 7–8% of GDP, below the government's long-standing ambition (articulated in earlier industrialisation strategies) of raising this to a substantially higher share. Special Economic Zones, Export Processing Zones, and the 'Buy Kenya Build Kenya' policy are the principal levers for industrial expansion.

Digital Economy

Kenya's digital economy anchored by M-Pesa's mobile-money infrastructure, the e-Citizen government-services platform, and a fast-growing ICT/BPO sector is among the most advanced in Sub-Saharan Africa and a key convergence point for India–Kenya Digital Public Infrastructure cooperation.

Infrastructure

The Port of Mombasa, the Standard Gauge Railway (SGR), and an expanding road network form Kenya's core economic infrastructure, complemented by a substantially green electricity grid. Infrastructure investment needs remain large relative to fiscal space, creating significant PPP and blended-finance opportunity

Investment Environment

KenInvest, the Nairobi International Financial Centre (NIFC), and Special Economic Zones (SEZs) form the cornerstone of Kenya's institutional framework for attracting and facilitating foreign investment. These institutions provide investor support, streamlined regulatory processes, investment incentives, and access to strategic business locations. Kenya's investment environment is further strengthened by relative macro-political stability, a common-law legal system, ongoing economic reforms, an investor-friendly business climate, and the established presence of numerous multinational corporations. Combined with its strategic location as East Africa's commercial gateway and membership in key regional trade blocs, these factors make Kenya one of the continent's most attractive destinations for foreign direct investment and regional business expansion.

Industrial Development

Industrial policy is organised around Special Economic Zones (Dongo Kundu, Naivasha), Export Processing Zones, and county-level industrial-park initiatives, with a strategic emphasis on agro-processing, light engineering and import-substitution manufacturing to reduce Kenya's persistent trade deficit.

Regional Trade Position

As the largest and most diversified economy in the East African Community and a founding participant in COMESA and AfCFTA, Kenya functions as the natural regional distribution and manufacturing base for investors including Indian companies seeking access to the wider East and Central African market.

Future Growth Drivers

- Continued digital-economy and fintech expansion, including Digital Public Infrastructure convergence with India.
- AfCFTA-enabled export diversification in agro-processing, textiles and light manufacturing.
- Infrastructure-led growth via SEZ/ICD development (Naivasha), port modernisation, and housing programmes.
- Deepening bilateral trade and investment architecture with India, underpinned by the JTC process, prospective FTA, and expanded institutional partnerships such as the one proposed in this report between CCI India and Kenyan counterparts.

5. Comprehensive Sector Analysis

Banking & Financial Services

Banking Industry Overview

Kenya's banking sector is the most developed in East Africa, regulated by the Central Bank of Kenya (CBK) and comprising 38 licensed commercial banks, of which the top tier KCB Group, Equity Bank, Co-operative Bank, NCBA, Absa Kenya, Stanbic and Standard Chartered Kenya dominates sector assets and has expanded aggressively across the EAC region. Kenyan banks are increasingly regional pan-African players, with Equity Group and KCB Group operating across multiple East and Central African markets.

Commercial Banking Structure

The sector is characterised by relatively high capital-adequacy ratios and improving asset quality following a period of elevated non-performing loans, alongside continued consolidation as smaller banks merge or exit amid tightening capital requirements under CBK's phased minimum-core-capital increase (targeting KSh 10 billion by 2029 for most banks).

Digital Banking and FinTech

Kenya is a global reference case for mobile-money-led financial inclusion. M-Pesa, launched by Safaricom in 2007, processes transaction values that substantially exceed the country's annual GDP and has catalysed an entire ecosystem of digital lenders, savings platforms, and merchant-payment solutions.

Mobile Payments

Mobile money penetration among Kenyan adults exceeds 80%, and the interoperability achieved between telecom-led mobile wallets and bank accounts (via Pesalink and related rails) has positioned Kenya as a natural partner for India's Unified Payments Interface (UPI) ecosystem architects

Insurance

Kenya's insurance penetration remains low relative to banking (estimated at around 2–2.5% of GDP), regulated by the Insurance Regulatory Authority (IRA), presenting substantial headroom for growth in life, health, agricultural (index-based) and micro-insurance products an area where Indian insurers and insurtech firms, with deep experience in low-penetration-market product design, hold directly relevant expertise.

Capital Markets

The Nairobi Securities Exchange (NSE) is one of Africa's oldest and most active bourses, offering equities, bonds, derivatives and REITs, alongside a growing green- and sustainability-bond segment. Capital-market deepening remains a government priority, with reforms targeting broadened retail participation, diaspora-bond issuance, and cross-listing facilitation areas where Indian capital-market institutions (NSE India, BSE, SEBI-regulated intermediaries) could offer technical-cooperation value.

Financial Inclusion

Kenya's formal financial inclusion rate (per FinAccess survey data) exceeds 80% of the adult population, among the highest in Sub-Saharan Africa, driven overwhelmingly by mobile-money access. Remaining gaps are concentrated in rural, pastoralist and northern-county populations, where last-mile agent-banking and satellite-connectivity-enabled digital finance present continuing opportunity.

MSME Finance

Despite high overall financial inclusion, the MSME credit gap remains substantial, as formal lenders continue to apply conservative collateral and documentation requirements poorly suited to informal-sector borrowers

Current Challenges

- Elevated domestic borrowing costs crowding out private-sector credit as government financing needs remain high.
- Persistent (though improving) non-performing loan ratios in select bank segments.
- Low insurance penetration and continued underinsurance of agricultural and climate risk.
- Currency volatility affecting cross-border banking and trade-finance costs.
- Regulatory-compliance costs (AML/CFT, data protection) rising for smaller financial institutions.

Investment Opportunities

- Digital lending and alternative-credit-scoring platforms targeting the MSME segment.
- Micro-insurance and index-based agricultural insurance products.
- Payments-infrastructure and interoperability technology, aligned with UPI-model discussions.
- Correspondent-banking and trade-finance partnerships supporting India–Kenya trade settlement, including expanded use of Special Rupee Vostro Accounts (SRVAs).
- Wealth-management and capital-market technology for NSE modernisation.

Future Outlook

Kenya's banking and financial services sector is expected to continue consolidating around larger, better-capitalised institutions while fintech-led financial inclusion expands across the country. At the same time, the convergence of India's Digital Public Infrastructure (DPI) model with Kenya's globally recognised mobile money ecosystem presents one of the most promising opportunities for structured India–Kenya institutional cooperation over the next five years. This collaboration could accelerate digital payments, financial inclusion, digital identity, innovation, and cross-border fintech partnerships.

Role of CCI India Banking & Financial Services

CCI India can establish an India–Kenya Banking & FinTech Council convening CBK-regulated Kenyan banks, Indian public- and private-sector banks, NBFCs and fintech firms, and India's payments-infrastructure institutions (NPCI International, as the relevant technical body, engaged separately at government level) to progress interoperable payments, correspondent-banking relationships, and MSME-lending technology transfer.

- Practical initiatives: annual India-Kenya FinTech & Banking Business Forum; SRVA/LCS adoption-awareness workshops with Indian and Kenyan banks; MSME digital-lending pilot with 2-3 Indian NBFC/fintech partners.
- Implementation strategy: Phase 1 (Year 1) convene Council and scoping mission; Phase 2 (Years 2-3) pilot payments-interoperability and MSME-lending projects; Phase 3 (Years 4-5) scale successful pilots and support insurance-sector partnerships.
- Stakeholders: Central Bank of Kenya, Kenya Bankers Association, RBI-regulated Indian banks, IRDAI-regulated insurers, NASSCOM fintech members, KenInvest.
- Expected outcomes: increased SRVA utilisation reducing dollar-dependency in bilateral trade settlement; at least 2 India-Kenya MSME-lending joint ventures within 3 years; measurable growth in bilateral correspondent-banking relationships.
- KPIs: number of SRVA accounts activated; volume of trade settled in local currency; number of fintech MoUs signed; MSME loans disbursed through Indian-partnered digital-lending pilots.
- Risks: currency volatility affecting settlement economics; regulatory-approval timelines in both jurisdictions; data-localisation compliance costs mitigated through phased piloting and early regulator engagement.

Agriculture & Agri-Business

Agriculture Overview

Agriculture is the structural backbone of the Kenyan economy contributing approximately 29% of GDP directly (and an estimated higher share when accounting for agro-processing and downstream linkages) while employing an estimated 54% of the national labour force

Tea

Kenya is the world's leading exporter of black tea by volume, with production concentrated in the fertile Central Highlands and Rift Valley regions. The sector is largely supported by the Kenya Tea Development Agency (KTDA), which organizes and represents thousands of smallholder tea farmers through a cooperative model. This structure has strengthened productivity, improved market access, enhanced quality standards, and enabled Kenya to maintain its position as a leading supplier of premium black tea to global markets.

Coffee

Kenyan Arabica coffee commands premium pricing in specialty-coffee markets globally, though production volumes have declined from historic peaks due to ageing tree stock, land fragmentation and cooperative-governance challenges. Government reform of the coffee cooperative and marketing system (including direct-settlement reforms) aims to reverse this decline and improve farmer returns.

Horticulture and Floriculture

Horticulture fresh vegetables, fruits and cut flowers is Kenya's fastest-growing agricultural export category and a leading foreign-exchange earner, with the flower industry alone exporting substantial volumes primarily to the Netherlands (via the Aalsmeer auction) and the broader EU market, supported by Nairobi's position as a major regional air-cargo hub via Jomo Kenyatta International Airport.

Dairy and Livestock

Kenya has East Africa's largest dairy industry, built primarily on smallholder zero-grazing production systems and supported by a well-developed processing sector led by cooperatives and private dairy companies. The sector plays a vital role in rural livelihoods, food security, and agricultural incomes. However, increasing climate variability, recurrent droughts, and pressure on grazing resources highlight the growing importance of investing in climate-resilient livestock production, sustainable rangeland management, improved animal health, and climate-smart dairy practices to ensure long-term productivity and resilience.

Fisheries

Freshwater fisheries (predominantly Lake Victoria Nile perch and tilapia) and a comparatively underdeveloped marine fisheries sector together support significant livelihoods but remain constrained by overfishing pressure, limited cold-chain infrastructure, and underinvestment in aquaculture.

Food Processing

Agro-processing dairy, edible oils, grain milling, and fruit/vegetable processing represents one of the highest-value-addition opportunities in the Kenyan economy, with significant potential to reduce post-harvest losses (estimated at 20-30% for perishables under current cold-chain gaps) while capturing greater export value than raw-commodity trade allows.

Agri-Tech, Precision Agriculture and Hydroponics

Kenya's agritech sector spanning satellite/remote-sensing advisory platforms, digital extension services, and input-financing apps among Africa's most active, building on the country's broader fintech and mobile-money strengths. Precision-agriculture adoption remains at an early stage but is expanding through partnerships between agritech start-ups, mobile network operators and development-finance institutions; hydroponic and greenhouse horticulture is growing around peri-urban Nairobi in response to land-scarcity and water-efficiency pressures.

Vertical Farming, Cold Chain, Irrigation and Warehousing

Cold-chain infrastructure remains a critical gap across the horticulture, dairy and fisheries value chains, with post-harvest losses representing a significant drag on farmer incomes and export competitiveness. Irrigation coverage remains low relative to potential Kenya irrigates only a modest fraction of its irrigable land leaving agricultural output highly exposed to rainfall variability. Warehousing and grain-storage capacity gaps similarly contribute to post-harvest losses in staple-crop value chains.

Potential

Beyond traditional tea, coffee and horticulture exports, Kenya has substantial untapped potential in processed foods, avocado (a rapidly growing export category driven by strong Asian and European demand), macadamia, and specialty/organic produce categories where Indian food-processing technology and cold-chain investment could materially expand Kenya's value-added export base.

Climate Challenges

Kenya's agriculture sector remains highly climate-vulnerable, with recurrent drought cycles (including the severe 2020-2023 Horn of Africa drought) periodically depressing agricultural GDP growth and food security.

Role of CCI India Agriculture & Agri-Business

- Practical initiatives: India–Kenya Agriculture & Agri-Tech Council; annual Agri-Business Buyer-Seller Meet pairing Indian agri-equipment/food-processing companies with Kenyan cooperatives and county agriculture departments; cold-chain and warehousing investment facilitation desk.
- Implementation strategy: Year 1 needs assessment with 5-6 priority counties and KTDA/coffee cooperative bodies; Years 2-3 pilot cold-chain and processing joint ventures in horticulture and dairy; Years 4-5 scale to irrigation-equipment manufacturing/assembly partnerships.
- Stakeholders: Kenya Ministry of Agriculture, KTDA, county agriculture departments, Indian agri-equipment manufacturers (tractors, irrigation, cold-chain), Indian FPO/cooperative-federation experts, NABARD-linked technical expertise.
- Expected outcomes: reduction in post-harvest losses in pilot value chains; at least 3-5 India-Kenya agri-processing joint ventures within 5 years; technology-transfer partnerships in irrigation and cold storage.
- KPIs: number of cold-chain/processing facilities co-invested; hectares under improved irrigation via partnership projects; volume/value of agri-trade facilitated through CCI India-brokered deals; number of farmer cooperatives engaged.
- Risks: climate variability affecting pilot-project economics; land-tenure and cooperative-governance complexity; currency risk on capital equipment imports mitigated through phased piloting, blended concessional finance, and strong local partner selection.

Pharmaceuticals & Healthcare

Healthcare System Overview

Kenya operates a mixed public-private healthcare system anchored by the rollout of the Social Health Insurance Fund (SHIF), which replaced the National Hospital Insurance Fund (NHIF) as part of the government's Universal Health Coverage (UHC) reform agenda.

Pharmaceutical Industry

Kenya has East Africa's most developed pharmaceutical manufacturing base, though the sector still imports a substantial majority of its medicines, positioning India the world's largest supplier of generic medicines by volume as Kenya's leading pharmaceutical trade partner. Indian pharmaceutical exports to Kenya span essential generics, vaccines, and increasingly, active pharmaceutical ingredients (APIs) for local formulation.

Generic Medicine

Kenya's public procurement system (via the Kenya Medical Supplies Authority, KEMSA) and private retail pharmacy sector both rely heavily on imported generics, the majority sourced from India. Local formulation and packaging capacity remains limited to a small number of Kenyan manufacturers, presenting a significant opportunity for Indian pharmaceutical companies to establish local formulation/fill-finish facilities to serve both the Kenyan and wider EAC market under COMESA/AfCFTA preferences.

Medical Devices and Diagnostics

Kenya's medical-device market remains heavily import-dependent, with diagnostic-equipment demand.

Biotechnology

Kenya's biotechnology sector remains nascent, concentrated in agricultural biotechnology research (via KALRO and international partners) rather than pharmaceutical biotech; India's growing vaccine and biosimilar manufacturing base presents longer-term collaboration potential as Kenya's regulatory and manufacturing capacity matures.

Telemedicine and Digital Health

Kenya's digital-health sector is expanding rapidly, leveraging the country's mobile-penetration strengths for teleconsultation, e-pharmacy, and SHIF-linked digital claims processing. India's substantial digital-health industry including telemedicine platforms and health-tech firms with African-market experience is well positioned to support Kenya's digital-health infrastructure build-out.

Healthcare Infrastructure

Kenya continues to invest in expanding hospital-bed capacity and specialised care (oncology, cardiology, renal care) to reduce medical-tourism outflows, historically directed toward India, South Africa and increasingly Turkey and the UAE.

India's medical-tourism and hospital-management sector already a preferred destination for Kenyan patients presents an opportunity for reciprocal investment: Indian hospital groups establishing or partnering with Kenyan specialty-care facilities to retain more complex-care spending within Kenya while continuing to serve as a referral destination for the most advanced procedures.

Current Challenges

- Heavy import-dependence for both finished pharmaceuticals and medical devices, exposing the sector to currency and supply-chain risk.
- SHIF implementation transition challenges, including provider-payment and claims-processing teething issues.
- Shortage of specialised medical personnel and diagnostic infrastructure outside major urban centres.
- Regulatory-approval timelines for new pharmaceutical products via the Pharmacy and Poisons Board.

Investment Opportunities

- Local pharmaceutical formulation and fill-finish manufacturing (generics, essential medicines) targeting the EAC regional market under AfCFTA rules of origin.
- Medical-device local assembly and diagnostics-equipment distribution/service partnerships.
- Specialty hospital joint ventures (oncology, cardiac care, nephrology) to address medical-tourism outflows.
- Digital-health platforms integrated with SHIF claims infrastructure.
- Pharmaceutical cold-chain and vaccine-logistics infrastructure.

Role of CCI India Pharmaceuticals & Healthcare

As a second explicitly prioritised sector, CCI India can lead formation of an India–Kenya Healthcare & Pharmaceuticals Council to translate India's position as Kenya's leading generics supplier into deeper local-manufacturing and specialty-care investment, building directly on the B2B engagement proposed at the April 2026 JTC session.

- Practical initiatives: India-Kenya Pharma & Medical Devices Buyer-Seller Meet; facilitation desk for Indian pharma companies evaluating Kenyan/EAC local-manufacturing investment; specialty-hospital joint-venture matchmaking; SHIF-linked digital-health pilot partnerships.
- Implementation strategy: Year 1 market-entry and regulatory-landscape briefing for Indian pharma/device majors and mid-tier exporters; Years 2-3 support at least one local formulation/fill-finish facility investment decision; Years 4-5 support specialty-hospital JV and medical-device local-assembly projects.

- Stakeholders: Kenya Ministry of Health, Pharmacy and Poisons Board, KEMSA, Social Health Authority (SHIF administrator), Indian pharmaceutical export bodies (Pharmexcil), Indian hospital groups, Indian medical-device manufacturers.
- Expected outcomes: at least one Indian-backed local pharmaceutical manufacturing investment within the roadmap period; expanded medical-device distribution partnerships; measurable reduction in Kenyan medical-tourism outflow to India through in-country specialty-care investment.
- KPIs: value of pharmaceutical/medical-device trade facilitated; number of manufacturing/JV investment decisions supported; number of specialty-care partnerships established; patients served under digital-health pilots.
- Risks: regulatory-approval timelines; currency risk on capital-intensive manufacturing investment; competition from other generic-medicine suppliers (China) mitigated through early regulatory engagement and leveraging India's established quality/GMP reputation.

Infrastructure Development

Roads

Kenya's road network the primary mode for domestic and regional freight has expanded substantially over the past decade, with continued investment in the Nairobi Expressway, the Mombasa-Nairobi highway corridor, and county-level road connectivity programmes under the Kenya Rural Roads Authority and Kenya Urban Roads Authority. Road maintenance financing (via the Road Maintenance Levy Fund) remains a persistent constraint relative to network expansion.

Railways

The Standard Gauge Railway (SGR), built with Chinese financing and now operating Mombasa-Nairobi and Nairobi-Naivasha segments, is Kenya's flagship rail infrastructure project, intended eventually to connect to Uganda, Rwanda and beyond as part of the Northern Corridor multimodal transport strategy.

India's own extensive railway-engineering and rolling-stock manufacturing capacity (via Indian Railways-linked PSUs and private rail-equipment manufacturers) represents a potential future partnership avenue for SGR extension phases, signalling, and rolling-stock maintenance.

Ports

The Port of Mombasa is East Africa's busiest deep-water port and the primary maritime gateway for Kenya, Uganda, Rwanda, South Sudan, eastern DR Congo and Burundi. Ongoing modernisation includes the second container terminal and the planned Lamu Port (part of the LAPSSET Corridor), intended to diversify Kenya's port capacity and open up northern Kenya to development.

Airports

Jomo Kenyatta International Airport (Nairobi) is East Africa's leading aviation hub for both passenger and air-cargo traffic the latter particularly critical for horticultural exports with continued investment in terminal capacity and cargo-handling infrastructure. Enhanced direct air connectivity between Indian metros and Nairobi remains a priority for both trade and tourism growth.

Warehousing and Logistics Parks

The planned Naivasha Special Economic Zone and Inland Container Depot (ICD), positioned along the SGR corridor, is designed to function as a dry-port and logistics-park hub serving both domestic industry and transit trade to landlocked EAC neighbours a flagship opportunity for Indian logistics-infrastructure and warehousing investors.

Industrial Parks and Special Economic Zones

Kenya's SEZ Act underpins a growing pipeline of industrial parks including Dongo Kundu (linked to Mombasa port expansion) and Naivasha offering tax and customs incentives designed to attract export-oriented manufacturing investment, including from Indian companies seeking a Kenyan/EAC manufacturing base.

Smart Cities and Urban Development

Konza Technopolis ('Silicon Savannah'), Kenya's flagship smart-city and ICT-park project south of Nairobi, continues phased development as a hub for technology companies, BPO/ITES operations, and applied-research institutions, alongside broader Nairobi Metropolitan Services urban-renewal and transport initiatives.

Affordable Housing

The Affordable Housing Programme, financed in part through the Affordable Housing Levy, aims to deliver large-scale affordable housing units across Kenya to address the country's growing housing deficit. The initiative is expected to generate significant demand for cost-effective construction technologies, locally manufactured building materials, innovative housing solutions, and PPP-based housing finance mechanisms, while creating opportunities for private sector participation and infrastructure investment.

Renewable Energy Infrastructure

Kenya's electricity grid is already over 90% renewable, with power generated primarily from geothermal, hydro, wind, and solar sources. Continued investment in grid expansion, rural electrification, transmission infrastructure, and off-grid mini-grid deployment remains a national priority to improve energy access, support economic growth, and strengthen long-term energy security and sustainability.

Role of CCI India Infrastructure Development

As the fourth explicitly prioritised sector, CCI India can establish an India–Kenya Infrastructure & PPP Council to connect Indian infrastructure EPC firms, equipment manufacturers, and project financiers with Kenya's SEZ, rail, port and housing

programmes, drawing on India's own extensive experience in PPP-structured infrastructure delivery.

- Practical initiatives: India-Kenya Infrastructure Investment Forum showcasing Naivasha SEZ/ICD, Dongo Kundu SEZ and Affordable Housing Programme opportunities to Indian EPC/construction firms; PPP-structuring technical-assistance desk; Indian construction-technology (precast/modular) pilot facilitation.
- Implementation strategy: Year 1 infrastructure-investment roadshow in Indian industrial/EPC hubs; Years 2-3 support at least 2 Indian-backed SEZ or housing-technology pilot investments; Years 4-5 support rail/logistics-corridor partnership feasibility studies.
- Stakeholders: Kenya Ministry of Transport, Ministry of Lands and Housing, Kenya Ports Authority, Kenya Railways Corporation, KenInvest, Special Economic Zones Authority, Indian EPC/construction majors, Indian infrastructure-finance institutions (India Exim Bank).
- Expected outcomes: at least 2-3 Indian infrastructure/construction-technology investment commitments within the roadmap period; formal PPP-structuring cooperation agreement; expanded direct-flight/logistics connectivity supporting trade growth.
- KPIs: value of infrastructure investment facilitated; number of PPP feasibility studies completed with Indian partner involvement; affordable-housing units delivered using Indian construction technology pilots.

6. ENABLING SECTORS

Manufacturing

Sector Overview

Kenya's manufacturing sector remains the anchor of the Bottom-Up Economic Transformation Agenda (BETA), targeted for expansion from roughly 7.8% to 20% of GDP under Vision 2030's long-term ambition, though current contribution stands closer to 7-8% of GDP.

Current Status & Market Size

The sector is concentrated in agro-processing, cement, steel, plastics, and consumer goods, centred on Nairobi, Mombasa, Nakuru and the Athi River-Kitengela industrial corridor

Government Initiatives

Key government levers include the Special Economic Zones (SEZ) Act, Buy Kenya Build Kenya policy, tax incentives for local assembly (notably automotive CKD/SKD), and the National Industrialisation Policy.

Key Challenges

High electricity and logistics costs, competition from cheaper imports, limited access to affordable long-term capital, and skills mismatches constrain competitiveness relative to regional peers.

Investment Opportunities

Opportunities exist in agro-processing (edible oils, dairy, leather), building materials, light engineering, plastics-to-packaging, and automotive component assembly linked to the growing East African Community (EAC) market of over 300 million consumers.

Indian Participation Current Footprint

Indian firms already operate in cement (via joint ventures), pharmaceuticals, steel re-rolling, and consumer goods; Indian-origin businesses form one of the largest manufacturing investor communities in Kenya.

Role of CCI India

CCI India can curate an annual India-Kenya Manufacturing & SEZ Investment Mission, connect Indian MSME manufacturers with Kenyan EPZ/SEZ authorities, and facilitate technology-licensing tie-ups for import-substitution industries.

Strategic Recommendations

Prioritise joint ventures in agro-processing and light engineering; support Kenyan SEZ roadshows in Indian industrial clusters (Ludhiana, Coimbatore, Rajkot, Pune).

Micro, Small and Medium Enterprises (MSMEs)

Sector Overview

MSMEs are the backbone of the Kenyan economy, accounting for approximately 30-40% of GDP and employing about 15 million people across roughly 7.4 million establishments, per Kenya National Bureau of Statistics (KNBS) MSME surveys.

Current Status & Market Size

The MSME credit gap, estimated at several hundred billion Kenyan shillings annually, highlights a significant unmet demand for affordable financing. This presents a substantial opportunity for structured lenders, banks, fintech companies, and development finance institutions to expand credit access and support business growth.

Government Initiatives

The Hustler Fund (Financial Inclusion Fund), Biashara Kenya Fund, and MSME Credit Guarantee Scheme are the government's principal instruments to widen access to affordable capital and formalise enterprises.

Key Challenges

Key constraints include stringent collateral requirements, high borrowing costs, low levels of digital and financial literacy, weak incentives for business formalisation, and limited access to markets and value chains. Together, these challenges restrict access to finance, reduce business competitiveness, and limit the growth and long-term sustainability of MSMEs.

Investment Opportunities

India's MSME-technology ecosystem (digital lending, e-invoicing, GST-style digitisation, cluster development) offers directly transferable models for Kenyan MSME formalisation and productivity enhancement.

Indian Participation Current Footprint

Indian NBFCs, fintech platforms and MSME cluster-development consultants are well positioned to co-design credit-scoring and cluster models suited to Kenya's informal economy.

Role of CCI India

CCI India can establish an India-Kenya MSME Partnership Cell offering mentorship exchanges, cluster-development pilots (leather, textiles, agro-processing), and B2B matchmaking between Indian MSME federations and Kenyan Jua Kali associations.

Strategic Recommendations

Pilot 2-3 MSME cluster projects using the Indian cluster-development model (CDP) adapted for Kenyan counties; explore concessional Lines of Credit dedicated to MSME equipment financing.

Startups & Innovation Ecosystem

Sector Overview

Kenya is East Africa's leading startup hub ('Silicon Savannah'), anchored by Nairobi's fintech, agritech, and mobility innovation clusters, and consistently ranks among Africa's top three startup ecosystems by funding volume.

Current Status & Market Size

Kenyan startups attracted several hundred million dollars in venture funding in recent years, though funding has moderated amid global venture-capital tightening; fintech (building on the M-Pesa legacy), agritech, cleantech, and health-tech dominate deal flow.

Government Initiatives

The Startup Bill (aimed at formal recognition and incentives for registered startups), Konza Technopolis, and Ajira Digital Programme for youth digital employment are central pillars of policy support.

Key Challenges

Early-stage funding gaps, regulatory uncertainty for digital assets and data protection compliance, and limited domestic institutional capital constrain scale-up beyond seed stage.

Investment Opportunities

India's mature startup ecosystem, DPIIT Startup India framework, and over 200,000 registered startups (as reported by DPIIT) offer strong potential for mentorship exchange, cross-border incubation and Indian venture capital deployment into Kenyan agritech and fintech.

Indian Participation Current Footprint

Indian venture funds and angel networks have shown growing interest in African fintech; Indian-founded startups are increasingly using Nairobi as a regional East Africa base.

Role of CCI India

CCI India, building on its own Bharat Startup Summit platform and its target of nurturing high-growth ventures, can launch an India-Kenya Startup Bridge connecting Kenyan founders with Indian accelerators, and facilitate a reciprocal investor roadshow.

Strategic Recommendations

Create a dedicated India-Kenya Startup Corridor MoU between CCI India and Kenyan innovation agencies; sponsor an annual cross-border pitch event.

Information & Communication Technology (ICT)

Sector Overview

ICT is one of Kenya's fastest-growing economic sectors, contributing an estimated 8–9% of GDP and driven by high mobile phone penetration, expanding internet connectivity, and a vibrant digital innovation ecosystem. The success of the M-Pesa mobile money platform has made Kenya a global leader in digital financial inclusion, fostering fintech innovation, digital payments, e-commerce, and technology-driven entrepreneurship across the country.

Current Status & Market Size

Kenya has over 65% internet penetration and mobile subscriptions exceeding 65 million; the sector spans telecom, business process outsourcing (BPO), software development and digital government services (e-Citizen).

Government Initiatives

Konza Technopolis ("Silicon Savannah"), the Digital Economy Blueprint, and the Ajira Digital Programme are central pillars of Kenya's strategy to position itself as a regional hub for digital services, innovation, and data centres. These initiatives promote digital infrastructure, technology innovation, digital skills development, startup growth, and ICT-enabled employment, while strengthening Kenya's competitiveness in the regional digital economy.

Key Challenges

Cybersecurity vulnerabilities, shortages of digital skills beyond Nairobi, and relatively high broadband and data costs in rural areas continue to constrain digital transformation. These challenges limit technology adoption, reduce access to digital services, and slow the growth of innovation and inclusive digital economic development across the country.

Investment Opportunities

India's global leadership in IT services (a sector exceeding USD 250 billion in exports) offers direct scope for Indian IT/ITES majors and mid-tier firms to establish delivery centres, training academies, and joint ventures in Nairobi and Konza.

Indian Participation Current Footprint

Indian IT firms and training institutes (NIIT, Aptech) already have a footprint in Kenya's digital skilling space; several Indian software product companies serve East African financial and telecom clients from India.

Role of CCI India

CCI India can organise an India-Kenya Digital Economy Council to match Indian IT/ITES investors with Konza Technopolis, and facilitate skilling partnerships between NASSCOM-affiliated training providers and Kenyan technical institutions.

Strategic Recommendations

Encourage Indian IT-ITES delivery-centre pilots at Konza; promote data-centre and cloud-infrastructure joint ventures.

Artificial Intelligence

Sector Overview

Kenya's AI ecosystem is nascent but rapidly emerging, driven by fintech applications, agricultural advisory tools, and a growing pool of AI-focused research at the University of Nairobi, Strathmore University and iLab Africa.

Current Status & Market Size

The government released Kenya's first AI Strategy (2025-2030) targeting responsible AI adoption across agriculture, health, and public service delivery, positioning Kenya as a regional AI policy leader in Africa.

Government Initiatives

The National AI Strategy, alongside the Data Protection Act (2019) and the Kenya Data Governance framework, provides the regulatory scaffolding for responsible AI deployment.

Key Challenges

Limited computing infrastructure, a shortage of specialised AI/ML talent, and data-quality gaps constrain scale.

Investment Opportunities

India's growing AI capability (IndiaAI Mission, large AI talent pool) presents opportunities for joint AI research partnerships, applied-AI solutions for agriculture and health, and capacity-building for Kenyan technical universities.

Indian Participation Current Footprint

Indian IT majors and AI research institutions are increasingly engaging with African markets through applied-AI pilots in agriculture and financial inclusion.

Role of CCI India

CCI India can facilitate an India-Kenya AI & Emerging Technology Council, connecting Indian AI solution providers with Kenyan ministries and universities for applied pilots in precision agriculture and digital health.

Strategic Recommendations

Support joint AI research grants between Indian and Kenyan universities; pilot AI-based crop advisory tools in partnership with Kenyan county governments.

Digital Economy & E-Governance

Sector Overview

Kenya's digital economy, anchored by the e-Citizen platform and mobile-money infrastructure, is one of Africa's most advanced, with digital financial services penetration among the highest globally.

Current Status & Market Size

Over 20,000 government services are digitised through e-Citizen; digital payments (M-Pesa and bank-linked platforms) process a transaction value exceeding the country's GDP annually.

Government Initiatives

The Digital Economy Blueprint, National Broadband Strategy, and the Konza Data Centre project underpin continued digitisation of government and commerce.

Key Challenges

Data privacy compliance costs, the persistent rural-urban digital divide, and growing cybersecurity risks associated with rapid digitisation remain key challenges for Kenya's digital economy. These constraints increase operational costs, limit inclusive access to digital services, and highlight the need for stronger cyber resilience, digital infrastructure, and regulatory capacity.

Investment Opportunities

India's Digital Public Infrastructure (DPI) model UPI, Aadhaar, DigiLocker is of direct relevance to Kenya's own e-Citizen and payments modernisation, presenting a G2G technology-transfer opportunity already being explored between the two governments.

Indian Participation Current Footprint

Discussions on UPI-like payment interoperability and Bharat Connect-style digital rails have featured in recent India-Kenya trade dialogues, reflecting active government-to-government engagement.

Role of CCI India

CCI India can convene a Digital Public Infrastructure Working Group linking India's DPI ecosystem architects with Kenya's ICT Authority to accelerate interoperable payment and identity systems.

Strategic Recommendations

Support a formal DPI knowledge-exchange programme; encourage Indian payment-technology firms to pilot interoperability projects with Kenyan banks and telcos.

Cybersecurity

Sector Overview

As Kenya's digital economy expands, cybersecurity has become a national priority, with the Computer Misuse and Cybercrimes Act and the National Kenya Computer Incident Response Team (National KE-CIRT/CC) forming the institutional backbone.

Current Status & Market Size

Kenya recorded a substantial rise in cyber-threat events in recent years, concentrated in financial services and government systems, according to national KE-CIRT/CC reporting.

Government Initiatives

The National Cybersecurity Strategy and sector-specific requirements from the Central Bank of Kenya for financial institutions are driving formal demand for cybersecurity investment.

Key Challenges

A shortage of certified cybersecurity professionals and fragmented regulatory enforcement across sectors weaken resilience.

Investment Opportunities

India's large and mature cybersecurity industry, including CERT-In expertise and private-sector security-operations-centre (SOC) capabilities, can support Kenyan public and financial-sector cyber-resilience.

Indian Participation Current Footprint

Indian cybersecurity firms and IT majors already service pan-African financial clients and could establish regional SOC hubs in Nairobi.

Role of CCI India

CCI India can broker MoUs between Indian cybersecurity firms/CERT-In-affiliated bodies and Kenya's National KE-CIRT/CC for capacity building, threat-intelligence sharing, and SOC-as-a-service partnerships.

Strategic Recommendations

Establish a joint cybersecurity capacity-building programme for Chief Information Security Officers (CISOs) in Kenya's financial sector to strengthen cyber resilience, enhance threat response capabilities, and promote knowledge sharing. At the same time, support Indian Security Operations Centre (SOC) providers in establishing a Nairobi delivery hub to provide advanced cybersecurity services, regional monitoring capabilities, and skilled employment opportunities while positioning Kenya as a regional cybersecurity centre.

Tourism & Hospitality

Sector Overview

Tourism is one of Kenya's top foreign-exchange earners, anchored by wildlife safaris (Maasai Mara, Amboseli, Tsavo), the coastal beach economy (Mombasa, Diani, Lamu), and MICE (meetings, incentives, conferences, exhibitions) tourism in Nairobi.

Current Status & Market Size

International arrivals have rebounded strongly post-pandemic, with Kenya recording well over 2 million visitors annually and tourism earnings running into billions of US dollars, supporting the government's target of 5 million annual visitors under Vision 2030.

Government Initiatives

Kenya Tourism Board's diversification strategy targets new source markets including India and the Gulf, alongside investment in the electronic Travel Authorisation (eTA) system that replaced visa stickers in January 2024, easing entry for Indian travellers.

Key Challenges

Infrastructure gaps at secondary destinations, seasonality, and periodic security perception risks affect sustained growth.

Investment Opportunities

Opportunities exist in mid-market hotel chains, eco-lodges, MICE infrastructure, and aviation connectivity; Indian hospitality brands and outbound travel platforms are well positioned to expand two-way tourism flows.

Indian Participation Current Footprint

Direct flight connectivity between Indian metros and Nairobi, growing Bollywood location-shooting interest, and rising Indian leisure and wedding-tourism demand for Kenyan safaris are notable trends.

Role of CCI India

CCI India can organise India-Kenya Tourism B2B roadshows, connect Indian hospitality investors with Kenya Tourism Board, and support joint marketing campaigns targeting Indian outbound travel and MICE segments.

Strategic Recommendations

Support direct-flight capacity expansion; facilitate Indian hotel-chain joint ventures in coastal and Nairobi markets; promote Kenya as a wedding and destination-tourism market to Indian travel trade.

Renewable Energy

Sector Overview

Kenya is a continental leader in renewable energy, with over 90% of its installed electricity generation capacity from renewable sources geothermal, hydro, wind, and solar making it one of the greenest grids in the world.

Current Status & Market Size

The Olkaria geothermal complex is Africa's largest, and the Lake Turkana Wind Power project is one of the continent's largest wind farms; off-grid solar mini-grids continue to expand rural electrification.

Government Initiatives

Feed-in-tariff frameworks, the Energy Act, and Kenya's commitment to the International Solar Alliance (ISA) which Kenya has moved to formalise signal continued renewable-sector prioritisation.

Key Challenges

Grid-integration bottlenecks, financing costs for large projects, and last-mile rural distribution remain key constraints.

Investment Opportunities

India's solar manufacturing scale, geothermal-adjacent engineering expertise, and its leadership of the International Solar Alliance create strong complementarities for joint solar EPC projects, mini-grid rollouts, and technology transfer.

Indian Participation Current Footprint

Indian renewable-energy EPC firms and equipment manufacturers have participated in solar and mini-grid projects across East Africa and are natural partners for Kenya's rural electrification push.

Role of CCI India

CCI India can establish a Renewable Energy Council to connect Indian solar/wind EPC firms and financiers with Kenya's Ministry of Energy and rural electrification agencies, and support Kenya's ISA framework participation.

Strategic Recommendations

Facilitate Indian EPC participation in mini-grid tenders; support technology transfer in solar-module assembly to serve the East African market.

Oil, Gas & Mining

Sector Overview

Kenya's hydrocarbon sector remains pre-commercial for oil (Turkana basin discoveries face pipeline and evacuation-infrastructure hurdles), while mining is an emerging contributor centred on titanium (mineral sands), soda ash, fluorspar, and gemstones.

Current Status & Market Size

Base Titanium's Kwale mineral-sands operation is among the largest mineral-sands producers in Africa; soda ash from Lake Magadi remains a significant export earner.

Government Initiatives

The Mining Act (2016) and ongoing licensing reforms aim to formalise artisanal mining and attract exploration investment, particularly in rare earths and battery minerals.

Key Challenges

Land-use conflicts, the continued informality of artisanal and small-scale mining, and unresolved economic and infrastructure challenges surrounding the Turkana oil pipeline continue to constrain the sector's growth.

Investment Opportunities

Significant opportunities exist in mineral processing, particularly for titanium and rare earth elements, as well as in exploration services and downstream petroleum products distribution. Kenya's emerging potential in battery and critical minerals also aligns well with India's growing demand for secure and diversified mineral supply chains, creating strong prospects for investment, technology transfer, and long-term industrial collaboration.

Indian Participation Current Footprint

Indian mining-equipment and engineering firms, along with downstream petroleum distributors, have shown selective interest in East African mineral and oil-services markets.

Role of CCI India

CCI India can facilitate exploratory missions connecting Indian mining and critical-minerals firms with Kenya's Ministry of Mining, and support technical partnerships in mineral processing and value addition.

Strategic Recommendations

Explore critical-minerals offtake and joint-venture processing agreements; support Indian participation in mining-sector capacity building.

Logistics & Supply Chain

Sector Overview

Kenya is East Africa's principal logistics gateway, anchored by the Port of Mombasa (the region's busiest deep-water port) and the Standard Gauge Railway (SGR) linking Mombasa to Nairobi and onward to Naivasha.

Current Status & Market Size

Mombasa handles cargo throughput exceeding 35 million tonnes annually, serving Kenya, Uganda, Rwanda, South Sudan, DR Congo, and Burundi as landlocked hinterland markets.

Government Initiatives

The Kenya National Logistics Master Plan, SGR Phase 2A/2B expansion, and Naivasha Inland Container Depot (ICD) as a dry-port and SEZ hub are central government priorities.

Key Challenges

Congestion at Mombasa port, high inland transport costs, and cross-border customs friction with EAC neighbours remain persistent bottlenecks.

Investment Opportunities

Opportunities include warehousing/cold-chain logistics parks, last-mile delivery technology, and multimodal freight solutions linking Mombasa-Nairobi-Naivasha-Kampala/Kigali corridors.

Indian Participation Current Footprint

Indian logistics and warehousing operators, as well as railway engineering firms, have relevant experience in dedicated freight corridors and multimodal logistics parks transferable to the Naivasha ICD model.

Role of CCI India

CCI India can facilitate Indian logistics-infrastructure investment in the Naivasha SEZ/ICD, and support B2B linkages between Indian freight-forwarding networks and Kenyan clearing-and-forwarding agents.

Strategic Recommendations

Encourage joint ventures in cold-chain and warehousing infrastructure; support technology-driven customs facilitation aligned with the CBIC-KRA pre-arrival information MoU.

Trade & Retail

Sector Overview

Kenya's retail sector is undergoing rapid formalisation, led by supermarket chains, shopping malls, and a fast-growing modern trade segment alongside a dominant traditional (duka) retail base.

Current Status & Market Size

Nairobi's mall economy has expanded significantly over the past decade, and Kenyan retail chains have begun regional expansion into Uganda, Tanzania and Rwanda.

Government Initiatives

The Kenya Retail Trade Policy and consumer-protection frameworks aim to balance formal-informal competition while safeguarding local traders under 'Buy Kenya Build Kenya'.

Key Challenges

Rent inflation in prime retail locations, counterfeit-goods competition, and supply-chain cost pressures affect retail margins.

Investment Opportunities

Franchise retail, organised grocery, and consumer-goods distribution present opportunities for Indian FMCG brands seeking East African market entry via Kenya as a regional hub.

Indian Participation Current Footprint

Indian consumer goods, apparel, and jewellery brands have already established a strong retail presence in Nairobi and Mombasa through franchise, distributor, and local partnership models. Their success demonstrates the growing demand for Indian products in Kenya and creates opportunities for further expansion, brand collaboration, retail investment, and deeper commercial partnerships across the country's consumer market.

Role of CCI India

CCI India can support Indian FMCG and retail-franchise brands in identifying Kenyan distribution partners, and organise sourcing/franchise B2B meets.

Strategic Recommendations

Facilitate the expansion of Indian FMCG brands through franchise partnerships and retail outlets in major Kenyan shopping malls, while promoting stronger collaboration between industry bodies, regulatory authorities, and businesses to combat counterfeiting, strengthen intellectual property protection, and improve consumer confidence in authentic products.

E-Commerce

Sector Overview

Kenya's e-commerce sector is expanding rapidly on the back of mobile-money penetration, smartphone adoption, and platforms such as Jumia and Kilimall, alongside social-commerce on WhatsApp and Instagram.

Current Status & Market Size

E-commerce gross merchandise value continues to grow at double-digit rates annually, though it remains a small share of total retail, constrained by last-mile logistics outside major cities.

Government Initiatives

The Digital Economy Blueprint and Consumer Protection (E-Commerce) framework aim to build trust and formalise digital trade, including cross-border e-commerce under AfCFTA's digital trade protocol.

Key Challenges

Last-mile delivery costs, digital payment fraud risk, and limited SME digitisation constrain broader adoption.

Investment Opportunities

Opportunities include e-commerce logistics/fulfilment infrastructure, payment-gateway integration, and cross-border B2B e-commerce platforms linking Indian MSME exporters with Kenyan buyers.

Indian Participation Current Footprint

Indian e-commerce enablement and payment-technology firms are natural partners for Kenyan platforms seeking to scale fulfilment and payments infrastructure.

Role of CCI India

CCI India can facilitate a B2B e-commerce corridor connecting Indian exporters (textiles, pharmaceuticals, consumer goods) with Kenyan online marketplaces and distributors.

Strategic Recommendations

Pilot a dedicated India-Kenya B2B e-commerce trade portal under CCI India's digital trade facilitation initiatives.

Textiles, Apparel & Leather

Sector Overview

Kenya's textile and apparel sector, anchored by Export Processing Zones, is a major formal-sector employer and exporter, benefiting from duty-free access to the US market under AGOA and to the EU under Everything But Arms.

Current Status & Market Size

Apparel exports (largely EPZ-based, garment-for-export manufacturing) represent one of Kenya's largest manufactured export categories; cotton production and the leather value chain remain underdeveloped relative to potential.

Government Initiatives

The Cotton, Textile and Apparel Growth and Development Strategy targets revival of domestic cotton-to-garment value chains ('cotton to Cabinet') to reduce reliance on imported fabric.

Key Challenges

Heavy dependence on imported fabric (limiting local value addition), AGOA-related market-access uncertainty, and an underdeveloped leather-tanning industry constrain the value chain.

Investment Opportunities

Opportunities exist in integrated textile mills, cotton-ginning modernisation, and leather-tanning/finishing plants; India's globally competitive textile and leather industries are directly relevant partners.

Indian Participation Current Footprint

Indian textile machinery suppliers and technical consultants have historically supported African textile-value-chain development and could anchor Kenyan integrated-mill projects

Role of CCI India

CCI India can connect Indian textile and leather machinery manufacturers and integrated-mill investors with Kenya's EPZ Authority and cotton-value-chain revival programme.

Strategic Recommendations

Support feasibility studies for an integrated cotton-to-garment mill; facilitate Indian leather-tanning technology transfer to Kenyan tanneries.

Blue Economy & Fisheries

Sector Overview

Kenya's Blue Economy, encompassing its Indian Ocean coastline, Lake Victoria, and inland water bodies, is an emerging growth pillar under Vision 2030, spanning fisheries, marine transport, and coastal tourism.

Current Status & Market Size

Fish production remains below potential due to limited deep-sea fishing capacity despite Kenya's large exclusive economic zone.

Government Initiatives

The Blue Economy Implementation Strategy and the Kenya Coast Guard Service aim to strengthen maritime governance, sustainable fisheries, and port-linked blue-economy industries.

Key Challenges

Overfishing in Lake Victoria, limited cold-chain and processing infrastructure, and under-investment in deep-sea fishing fleets constrain value capture.

Investment Opportunities

Opportunities include fish-processing and cold-chain infrastructure, aquaculture technology, and shipbuilding/marine-services investment; India's own blue-economy and fisheries-modernisation experience is directly transferable.

Indian Participation Current Footprint

Indian marine-engineering and fisheries-technology firms have limited but growing engagement in East African blue-economy projects.

Role of CCI India

CCI India can facilitate India-Kenya Blue Economy cooperation, connecting Indian aquaculture and marine-processing technology providers with Kenyan coastal county governments.

Strategic Recommendations

Support pilot aquaculture and cold-chain fisheries-processing joint ventures; explore Indian shipbuilding-sector collaboration for coastal vessel maintenance.

Forestry

Sector Overview

Kenya's forest cover, targeted to reach 30% under the national tree-growing agenda ('Ek Ped Maa Ke Naam'-aligned reforestation drives with India), remains below 10% currently, making afforestation a national priority.

Current Status & Market Size

Commercial forestry (timber, plantation forestry) supports construction, furniture, and paper industries, while natural forests provide critical watershed and biodiversity services..

Government Initiatives

The National Landscape and Ecosystem Restoration Programme targets planting 15 billion trees by 2032, alongside a moratorium-managed logging policy to balance conservation and commercial forestry.

Key Challenges

Deforestation pressure from agricultural expansion, weak plantation-forestry investment, and reliance on imported timber and paper products persist.

Investment Opportunities

Opportunities exist in commercial plantation forestry, sustainable timber processing, and agroforestry technology; Kenya's tree-planting agenda aligns with India's own large-scale afforestation experience.

Indian Participation Current Footprint

India's High Commission in Nairobi has already launched joint tree-planting initiatives in Kenya, providing a strong platform for expanded forestry-sector cooperation.

Role of CCI India

CCI India can support Indian agroforestry and sustainable-timber technology providers in partnering with Kenya Forest Service on commercial plantation development.

Strategic Recommendations

Facilitate joint plantation-forestry investment pilots; support carbon-credit-linked afforestation financing structures.

Education & Skill Development

Sector Overview

Kenya has one of Africa's most developed education systems, with a literacy rate above 80% and a large, youthful population entering the workforce annually, creating both a skilling opportunity and an employment challenge.

Current Status & Market Size

The Competency-Based Curriculum (CBC) reform and expansion of Technical and Vocational Education and Training (TVET) institutions are reshaping the education-to-employment pipeline.

Government Initiatives

The TVET expansion programme and Kenya Kwanza's Affordable Education agenda emphasise skills alignment with labour-market needs, including digital and green-economy skills.

Key Challenges

Youth unemployment remains high, skills mismatches persist between graduate output and employer needs, and TVET infrastructure is unevenly distributed across counties.

Investment Opportunities

India's ITEC scholarship programme, IIT/NIT-linked technical education models, and skilling frameworks (Skill India) offer strong potential for TVET curriculum partnerships and joint skilling centres.

Indian Participation Current Footprint

Indian universities and training providers already host Kenyan students under ITEC and self-financed programmes; Indian ed-tech platforms are expanding into East Africa.

Role of CCI India

CCI India can facilitate India-Kenya skilling partnerships, including sector-specific Centres of Excellence (agriculture, healthcare, ICT) co-developed with Indian technical institutions and Kenyan TVET authorities.

Strategic Recommendations

Establish 2–3 Joint Skill Development Centres of Excellence in priority sectors and expand ITEC-linked technical scholarships through CCI India member institutions to strengthen skills, workforce development, technology transfer, and long-term India–Kenya institutional collaboration.

Water Resources & Sanitation

Sector Overview

Water security is a critical development priority for Kenya, with access to safely managed drinking water still incomplete in many rural and peri-urban areas despite significant infrastructure investment.

Current Status & Market Size

Urban water utilities face non-revenue water losses exceeding 40% in several towns, while rural areas rely heavily on boreholes, water pans, and community water projects.

Government Initiatives

The Kenya Water Towers Agency, National Water Harvesting and Storage Authority, and Big Four/BETA-linked water-access targets guide sector investment priorities.

Key Challenges

Ageing water distribution infrastructure, increasing climate-induced water stress, high levels of non-revenue water, and the weak financial sustainability of utilities continue to constrain efficient, reliable, and equitable water service delivery across many parts of the country.

Investment Opportunities

Opportunities exist in water-treatment technology, smart-metering, desalination for coastal areas, and irrigation-linked water storage; India's water-technology and irrigation-engineering sector is directly relevant.

Indian Participation Current Footprint

Indian water infrastructure EPC firms have extensive experience in delivering irrigation, water supply, and wastewater projects across Africa. With proven engineering expertise and cost-effective solutions, they are well positioned to partner with Kenyan county governments to modernize water infrastructure, improve irrigation systems, expand access to safe water, and support climate-resilient water management initiatives.

Role of CCI India

CCI India can connect Indian water-technology firms with Kenya's Water Sector Trust Fund and county water utilities for smart-metering and non-revenue-water reduction projects

Strategic Recommendations

Support pilot smart-water-metering projects in 2-3 counties; facilitate Indian EPC participation in water-storage and irrigation infrastructure tenders.

Environment & Climate Change

Sector Overview

Kenya is globally recognised for climate leadership, having hosted the inaugural Africa Climate Summit in Nairobi and positioning itself as a hub for green growth, carbon markets, and climate finance.

Current Status & Market Size

Kenya's Nationally Determined Contribution (NDC) targets a substantial reduction in greenhouse-gas emissions by 2030, supported by its already-green electricity grid and growing carbon-credit project pipeline. Kenya's voluntary carbon market is among Africa's most active, with growing interest in nature-based and renewable-energy carbon-credit projects.

Government Initiatives

The Climate Change Act, National Climate Change Action Plan, and Nairobi-based Africa Carbon Markets Initiative underpin Kenya's climate governance architecture.

Key Challenges

Vulnerability to recurrent drought and flooding, carbon-market integrity concerns, and financing gaps for adaptation constrain progress.

Investment Opportunities

Opportunities include climate-resilient agriculture technology, carbon-project development, and climate-finance instruments; India's climate-technology and renewable-energy expertise is complementary.

Indian Participation Current Footprint

Indian renewable-energy and climate-technology firms are natural partners for Kenya's carbon-market and adaptation-financing initiatives.

Role of CCI India

CCI India can facilitate India-Kenya cooperation on carbon-market development and climate-resilient technology transfer, aligned with both countries' International Solar Alliance engagement.

Strategic Recommendations

Support joint climate-technology pilots in drought-resilient agriculture; explore carbon-credit project partnerships between Indian and Kenyan developers.

Green Economy & Circular Economy

Sector Overview

Kenya has emerged as an African leader in circular-economy policy, notably through its 2017 single-use-plastic-bag ban, one of the world's strictest, and growing investment in waste-to-value industries.

Current Status & Market Size

Nairobi's e-waste recycling, plastics-recycling, and organic-waste-to-compost/biogas sub-sectors are expanding, supported by county-level solid-waste-management reforms.

Government Initiatives

The National Sustainable Waste Management Policy and Extended Producer Responsibility regulations are formalising circular-economy obligations for manufacturers.

Key Challenges

Informal waste-picker integration, limited recycling infrastructure, and financing costs for waste-to-energy plants constrain scale.

Investment Opportunities

Opportunities exist in plastics recycling, e-waste processing, and waste-to-energy plants; India's growing circular-economy and waste-management technology sector is a natural collaborator.

Indian Participation Current Footprint

Indian waste-management and recycling-technology firms have relevant experience adaptable to Kenyan municipal contexts.

Role of CCI India

CCI India can connect Indian circular-economy technology providers with Kenyan county governments and the National Environment Management Authority (NEMA) for waste-to-value pilot projects.

Strategic Recommendations

Facilitate joint ventures between Indian and Kenyan firms to develop plastics and e-waste recycling infrastructure in Nairobi and Mombasa, strengthening waste management, resource recovery, and circular economy initiatives.

Real Estate & Construction

Sector Overview

Kenya's real estate and construction sector remains a leading contributor to GDP, driven by urbanisation, the Affordable Housing Programme, and continued commercial/office development in Nairobi.

Current Status & Market Size

The Affordable Housing Programme targets construction of hundreds of thousands of housing units nationally, financed partly through the Affordable Housing Levy, alongside continued private-sector residential and commercial development.

Government Initiatives

The Affordable Housing Programme, the Nairobi Metropolitan Services urban-renewal agenda, and Special Economic Zone-linked industrial-park development are key government priorities.

Key Challenges

High construction-financing costs, land-tenure complexities, and building-materials cost inflation constrain affordability.

Investment Opportunities

Opportunities exist in affordable-housing construction technology (precast, modular), building materials manufacturing, and PPP-based urban infrastructure; India's affordable-housing and construction-technology expertise (PMAY-linked innovation) is directly relevant.

Indian Participation Current Footprint

Indian construction and building-materials firms have participated selectively in East African infrastructure and housing projects.

Role of CCI India

CCI India can facilitate Indian affordable-housing technology providers' participation in Kenya's Affordable Housing Programme through PPP structuring support.

Strategic Recommendations

Pilot Indian precast/modular construction technology in a flagship affordable-housing project; support building-materials joint ventures.

Creative Industries & Media

Sector Overview

Kenya's creative economy film, music, fashion, and digital content is an increasingly recognised growth sector, with Nairobi emerging as a regional hub for East African film and content production.

Current Status & Market Size

The Kenya Film Commission has intensified efforts to position Kenya as a filming destination, while the music and fashion sub-sectors are expanding through digital-streaming and social-media-driven monetisation.

Government Initiatives

The Creative Economy Policy and Kenya Film Commission incentives (location fee waivers, co-production frameworks) aim to attract international film and media investment.

Key Challenges

Intellectual property enforcement gaps, limited production financing, and inadequate distribution infrastructure continue to constrain monetisation, reducing investment, revenue generation, and the commercial growth of the creative sector.

Investment Opportunities

Opportunities exist in film co-production, animation/content outsourcing, and fashion-value-chain development; India's globally significant film and animation industry (Bollywood, VFX/animation outsourcing hubs) is a natural partner.

Indian Participation Current Footprint

Growing Bollywood interest in Kenyan filming locations and rising Indian diaspora cultural engagement provide a foundation for expanded creative-sector cooperation.

Role of CCI India

CCI India can facilitate India–Kenya co-production agreements and connect Indian animation and VFX firms with Kenyan creative talent, fostering joint projects, technology transfer, skills development, market access, and global content production opportunities.

Strategic Recommendations

Support a Kenya-India Film & Creative Industries Forum; explore co-production treaty discussions between the two governments.

Women Entrepreneurship

Sector Overview

Women-led enterprises form a substantial share of Kenya's MSME base, particularly in trade, agriculture and services, yet face disproportionate barriers to formal finance and market access.

Current Status & Market Size

Government-backed funds such as the Women Enterprise Fund and the Affirmative Action Access to Government Procurement Opportunities (AGPO, reserving 30% of public procurement for women, youth and persons with disabilities) aim to redress structural gaps.

Government Initiatives

The Women Enterprise Fund, AGPO procurement quota, and Hustler Fund's gender-inclusive design are key policy instruments.

Key Challenges

Collateral barriers, limited access to export markets, and disproportionate care-economy burdens constrain scale-up for women entrepreneurs.

Investment Opportunities

Establish gender-focused investment funds, digital lending platforms, and MSME financing solutions to improve women's access to affordable credit and business capital.

Indian Participation Current Footprint

Indian women-entrepreneurship networks and impact-investment funds have relevant experience in gender-lens MSME financing models transferable to Kenya.

Role of CCI India

CCI India can establish a Women Entrepreneurs' Exchange Programme connecting Kenyan women-led MSMEs with Indian counterparts for mentorship, market access, and co-investment.

Strategic Recommendations

Facilitate a dedicated India-Kenya Women Business Council under CCI India; support gender-lens investment matchmaking.

Youth Entrepreneurship

Sector Overview

With a median age below 20 and roughly 800,000 young people entering the labour market annually, youth entrepreneurship and employment is Kenya's most pressing socio-economic priority.

Current Status & Market Size

Youth unemployment remains significantly elevated relative to overall unemployment, driving strong policy focus on the gig economy, digital freelancing (Ajira Digital), and youth-targeted enterprise funds.

Government Initiatives

The Youth Enterprise Development Fund, Ajira Digital Programme, and Hustler Fund collectively target improved youth access to capital, digital jobs, and enterprise skills.

Key Challenges

Limited access to affordable credit, skills mismatches, and saturated informal-sector competition constrain youth enterprise sustainability.

Investment Opportunities

Significant opportunities exist in youth-focused digital skilling partnerships, agritech innovation, gig economy platforms, and youth-led export readiness programmes. These initiatives can enhance employability, promote entrepreneurship, strengthen digital capabilities, and enable young entrepreneurs to access regional and global markets.

Indian Participation Current Footprint

India's extensive youth entrepreneurship ecosystem, supported by initiatives such as Startup India and Skill India, provides proven models that can be adapted in Kenya. These programmes offer opportunities for mentorship, skill development, startup incubation, innovation exchange, and institutional partnerships to strengthen youth-led enterprises and foster entrepreneurship.

Role of CCI India

CCI India can launch a Kenya–India Youth Entrepreneurship & Innovation Exchange to connect Kenyan youth innovators with Indian incubators, startup ecosystems, skilling institutions, and industry mentors. The initiative can promote knowledge sharing, capacity building, startup collaboration, innovation exchange, and cross-border entrepreneurship opportunities.

Strategic Recommendations

Support a structured youth-entrepreneur exchange and mentorship fellowship co-funded by CCI India members and Kenyan youth agencies.

7. Major Challenges Facing Kenya

Agriculture Climate Vulnerability & Low Productivity

- **Root Cause**
Kenya's agriculture remains heavily dependent on rain-fed farming, making it highly vulnerable to droughts, erratic rainfall, and climate change. Productivity is further constrained by fragmented smallholder landholdings, ageing tea and coffee plantations, limited irrigation, low mechanisation, and inadequate access to quality inputs, finance, and modern farming technologies.
- **Economic Impact**
Recurrent drought cycles (e.g., 2020-2023) depress agricultural GDP growth, elevate food-import bills, and disproportionately affect rural livelihoods, given agriculture's ~54% share of employment.
- **Global Best Practice**
India's watershed-management programmes, drought-tolerant seed development (ICAR), and micro-irrigation subsidy models (e.g., Pradhan Mantri Krishi Sinchayee Yojana) offer directly transferable lessons.
- **Possible Solutions**
Expanded irrigation investment, climate-resilient seed variety adoption, index-based crop insurance, and cooperative-governance reform.
- **Role of CCI India**
Convene an India-Kenya Climate-Resilient Agriculture Working Group under the Agriculture Council to pilot irrigation and insurance solutions in 2-3 drought-prone counties.

Finance-MSME Credit Gap

- **Root Cause**
Conservative collateral requirements, thin credit-history data for informal-sector borrowers, and high cost of long-term capital.
- **Economic Impact**
Constrains MSME growth and formalisation despite MSMEs representing an estimated 30-40% of GDP and the majority of employment.
- **Global Best Practice**
India's Unified Payments Interface (UPI)-enabled digital lending, Account Aggregator framework, and Priority Sector Lending norms have measurably expanded formal MSME credit access.
- **Possible Solutions**
Alternative credit-scoring using mobile-money transaction data, credit-guarantee scheme expansion, and digital-lending platform partnerships.
- **Role of CCI India**
Facilitate pilot MSME digital-lending partnerships as outlined under the Banking & FinTech Council .

Healthcare Access, Affordability and Infrastructure Gaps

- **Root Cause**
Uneven distribution of specialist care outside major urban centres, transitional challenges in SHIF implementation, and heavy reliance on imported pharmaceuticals and devices.
- **Economic Impact**
Continued outflow of medical-tourism spending, elevated out-of-pocket costs for specialised care, and rural-urban health-outcome disparities.
- **Global Best Practice**
India's Ayushman Bharat digital health-claims infrastructure and Jan Aushadhi affordable-generics retail model offer relevant design lessons for SHIF and local pharmaceutical retail expansion.
- **Possible Solutions**
Local pharmaceutical manufacturing investment, specialty-hospital joint ventures, and digital-health/telemedicine expansion into underserved counties.
- **Role of CCI India**
Lead the Healthcare & Pharmaceuticals Council initiatives targeting local manufacturing and specialty-care investment.

Infrastructure Financing Gap and Maintenance Deficit

- **Root Cause**
High public debt constraining new capital investment; historically China-dominated infrastructure financing narrowing diversification of partners; maintenance underfunding relative to asset base.
- **Economic Impact**
Elevated logistics costs (port congestion, road-maintenance backlogs) reduce trade competitiveness and raise consumer prices.

- **Global Best Practice**
India's National Infrastructure Pipeline and hybrid-annuity PPP models offer replicable structures for blended public-private infrastructure financing.
- **Possible Solutions**
Diversified infrastructure financing (including Indian EPC/finance participation), expanded PPP frameworks, and dedicated road/rail maintenance funding.
- **Role of CCI India**
Drive the Infrastructure & PPP Council to diversify Kenya's infrastructure financing base.

Manufacturing & MSMEs Competitiveness Constraints

- **Root Cause**
High electricity and logistics costs, import competition, and limited access to affordable long-term capital.
- **Economic Impact**
Manufacturing's GDP share (~7-8%) remains below government ambition, constraining formal-sector job creation.
- **Global Best Practice**
India's cluster-development programme (CDP) model for MSME productivity enhancement and Special Economic Zone incentive design.
- **Possible Solutions**
SEZ/EPZ expansion, cluster-based MSME development, and targeted industrial-power tariff reform.
- **Role of CCI India**
Support SEZ investment missions and MSME cluster pilots.

Logistics & Trade Port Congestion and Cross-Border Friction

- **Root Cause**
Mombasa port capacity constraints, inland transport cost inflation, and cross-border customs documentation friction with EAC neighbours.
- **Economic Impact**
Elevated landed-cost of goods for Kenya and landlocked hinterland markets, undermining regional trade competitiveness.
- **Global Best Practice**
India's dedicated freight-corridor and GST e-way-bill digitisation model for streamlined logistics documentation.
- **Possible Solutions**
Naivasha ICD/SEZ development, digitised customs pre-arrival information exchange (per the April 2026 CBIC-KRA MoU), and port-capacity expansion.
- **Role of CCI India**
Support implementation monitoring of the CBIC-KRA pre-arrival information exchange and facilitate Indian logistics-infrastructure investment in Naivasha.

Employment & Youth Unemployment

- **Root Cause**
Approximately 800,000 new labour-market entrants annually against constrained formal-sector job creation; skills mismatches between education output and employer demand.
- **Economic Impact**
Elevated youth unemployment/underemployment, informal-sector overcrowding, and associated social and political risk, particularly ahead of the 2027 election cycle.
- **Global Best Practice**
India's Skill India Mission and Startup India ecosystem for youth entrepreneurship and vocational-skills alignment.
- **Possible Solutions**
TVET expansion aligned to labour-market demand, digital-gig-economy formalisation (Ajira Digital), and youth-entrepreneurship financing.
- **Role of CCI India**
Establish joint Skill Development Centres of Excellence and the Youth Entrepreneurship Exchange.

Climate Change and Water Scarcity

- **Root Cause**
Recurrent drought and flood cycles, low irrigation coverage, and ageing water-distribution infrastructure with non-revenue water losses exceeding 40% in several towns.
- **Economic Impact**
Food security risks, unreliable urban water supply, and rising climate adaptation financing needs remain key challenges, increasing pressure on sustainable development and infrastructure resilience.
- **Global Best Practice**
India's Jal Jeevan Mission for rural water-access expansion and smart-metering non-revenue-water reduction programmes.
- **Possible Solutions**
Smart-metering pilots, water-storage/irrigation infrastructure investment, and climate-adaptation financing instruments.
- **Role of CCI India**
Facilitate pilot smart-water-metering projects with Indian water-technology firms in partnership with county water utilities.

Urbanisation Pressures

- **Root Cause**
Rapid rural-urban migration concentrated in Nairobi and Mombasa outpacing housing, transport and sanitation infrastructure delivery.
- **Economic Impact**
Informal-settlement expansion, urban-transport congestion costs, and housing-affordability pressure.

- **Global Best Practice**
India's Pradhan Mantri Awas Yojana affordable-housing and smart-cities programme design.
- **Possible Solutions**
Affordable Housing Programme acceleration using cost-effective construction technology, and urban-transport (BRT, non-motorised transport) investment.
- **Role of CCI India**
Support Indian affordable-housing technology pilots under the Infrastructure Council.

Digital Divide

- **Root Cause**
Rural broadband-infrastructure gaps and disparities in digital literacy and device affordability outside major urban centres.
- **Economic Impact**
Uneven access to e-Citizen digital government services, digital financial inclusion, and online-education/gig-economy opportunities.
- **Global Best Practice**
India's Digital India and BharatNet rural-connectivity programmes.
- **Possible Solutions**
Expanded rural broadband investment, device-affordability financing, and digital-literacy programming.
- **Role of CCI India**
Support the DPI Working Group's rural-inclusion workstream.

Energy Grid Reliability and Access Gaps

- **Root Cause**
Transmission and distribution infrastructure gaps limiting last-mile rural electrification despite Kenya's largely renewable generation mix.
- **Economic Impact**
Rural and peri-urban businesses face reliability constraints, affecting productivity and MSME competitiveness.
- **Global Best Practice**
India's Saubhagya rural-electrification scheme and mini-grid regulatory frameworks.
- **Possible Solutions**
Off-grid solar mini-grid expansion, grid-strengthening investment, and last-mile distribution reform.
- **Role of CCI India**
Facilitate Indian EPC participation in mini-grid tenders via the Renewable Energy Council.

Governance Fiscal Consolidation and Debt Sustainability

- **Root Cause**
Elevated public debt levels and fiscal-deficit pressure (forecast to widen to ~6.1% of GDP in 2026) constraining public-investment capacity.
- **Economic Impact**
High risk of debt distress per IMF/World Bank assessment, raising borrowing costs and constraining counter-cyclical fiscal space.
- **Global Best Practice**
Structured fiscal-consolidation programmes supported by IMF engagement, alongside revenue-mobilisation digitisation (India's GST/e-invoicing model as a reference case for tax-base broadening).
- **Possible Solutions**
Continued fiscal-consolidation implementation, revenue-administration digitisation, and diversified concessional financing sources.
- **Role of CCI India**
Support policy-dialogue platforms connecting Indian fiscal-technology expertise with Kenya Revenue Authority modernisation efforts.

8.Strategic Role of CCI India

1. Institutional Rationale

Under the leadership of Director General Mr. Munindra Kumar, CCI India has an established track record of convening large-scale, policy-linked business platforms including its Ethanol and Biofuel Conference and the Bharat Startup Summit 2026, which set a target of nurturing ten high-growth ventures with unicorn potential within two years.

2. Trade Facilitation

CCI India can establish a standing India–Kenya Trade Facilitation Desk to help exporters and importers navigate standards compliance and customs processes, converting government-level mechanisms into practical trade-support services for businesses.

3. Investment Promotion

CCI India can help Indian businesses explore Kenya by providing investment guidance and connecting them with relevant authorities.

4. Business Matchmaking B2B, B2G and G2B

- **B2B:** Structured buyer-seller meets in priority sectors (agriculture, pharma, banking, infrastructure) connecting Indian exporters/investors with Kenyan counterparts.
- **B2G:** Facilitated engagement between Indian companies and Kenyan county/national government procurement and investment bodies.
- **G2B:** Channel for Kenyan government agencies to reach vetted Indian industry participants for specific investment or procurement opportunities.

5. Trade Missions and Business Delegations

CCI India can institutionalise an annual India-Kenya Business Delegation alternating between New Delhi and Nairobi anchored around the four priority sectors, timed where possible to align with the annual India-Kenya JTC cycle for maximum policy-business coherence.

6. Startup Collaboration and Innovation Hubs

Building on CCI India's Bharat Startup Summit platform, a dedicated India-Kenya Startup Bridge can connect Kenyan 'Silicon Savannah' founders with Indian accelerators, corporate venture-capital arms, and DPIIT-registered startup networks, alongside reciprocal Indian startup engagement with Nairobi's innovation ecosystem (iHub, Nailab, Konza).

7. MSME Development

An India-Kenya MSME Partnership Cell can pair Indian MSME cluster-development expertise with Kenyan Jua Kali associations and county enterprise-development offices, piloting cluster models in leather, textiles and agro-processing.

8. Technology Transfer

CCI India can broker structured technology-licensing and joint-venture arrangements across agri-processing equipment, pharmaceutical manufacturing, water technology, and renewable-energy EPC the highest-value-add form of engagement beyond simple trade.

9. Skill Development and Capacity Building

Partner with leading Indian technical institutions to establish 2–3 Joint Skill Development Centres of Excellence in Kenya, focusing on priority sectors such as agriculture, healthcare, and ICT.

10. Buyer-Seller Meets and Sector-Specific Councils

CCI India should formally establish five sector Councils mirroring this report's priority structure: the Agriculture Council, Healthcare Council, Banking Council, Infrastructure Council, and Digital Economy Council, each with a defined charter, membership base, and annual buyer-seller meet.

11. India-Kenya Business Forum and CEO Forum

A standing India-Kenya Business Forum (broad membership) and a smaller, invitation-only India-Kenya CEO Forum (senior corporate leadership from both countries) can together provide both wide-based engagement and high-level strategic dialogue, with the CEO Forum convening annually alongside the JTC or a major bilateral visit.

12. Policy Advocacy and Market Intelligence

CCI India can serve as a structured channel for member feedback into the India-Kenya FTA negotiation process and JTC agenda-setting, while publishing periodic market-intelligence briefs (building on this report) to keep member companies current on regulatory and opportunity developments.

13. Export Promotion and Investment Advisory

Dedicated export-promotion support for Indian MSME exporters targeting the Kenyan/EAC market, paired with investment-advisory services for Kenyan companies and county governments seeking Indian capital or technology partners.

14. Research Collaboration and University Partnerships

CCI India can facilitate research partnerships between Indian technical/agricultural universities (IITs, ICAR institutes, agricultural universities) and Kenyan counterparts (University of Nairobi, Strathmore University, KALRO), particularly in applied AI for agriculture and health.

15. PPP Facilitation

Given Kenya's infrastructure financing constraints, CCI India can provide PPP structuring orientation and advisory support to Indian infrastructure companies exploring opportunities in Kenya.

16. Global Best Practices from Other Chambers of Commerce

International chamber models provide valuable lessons for designing effective bilateral engagement frameworks. The **India-UAE and India-ASEAN business councils** demonstrate the importance of sector-focused platforms, regular CEO-level dialogues, and structured industry collaboration. Similarly, the **Indo-German Chamber of Commerce's skill-development-centre model** offers a strong template for CCI India's proposed Centres of Excellence, while the **India-Africa Business Council's delegation approach** provides a scalable model for deeper Kenya-specific trade, investment, and partnership facilitation.

17. Expected Economic Impact

- Measurable acceleration of bilateral trade beyond the current USD 4.31 billion baseline (FY 2025-26).
- Multiple new Indian manufacturing/JV investment decisions across the four priority sectors within five years.
- Expanded MSME credit access and cluster-development outcomes in pilot counties.
- Strengthened institutional trust and business-to-business trust underpinning the broader India-Kenya FTA negotiation process.

9. Five-Year Roadmap

Year 1 Foundation

Objectives

- Formalise CCI India's institutional Kenya-partnership mandate
- Establish sector Councils and governance structure
- Complete baseline sector scoping missions

Key Activities

- Sign CCI India-Kenya High Commission institutional MoU
- Launch 5 sector Councils (Agriculture, Healthcare, Banking, Infrastructure, Digital Economy)
- Publish this Knowledge Report and disseminate to member companies

Stakeholders

- MoU signed (Y/N)
- 5 Councils operational
- Number of scoping missions completed
- Member-company engagement rate

Risk Mitigation

Institutional onboarding delays can be reduced by establishing a dedicated CCI India Kenya Desk with a designated coordinator responsible for managing stakeholder engagement, facilitating communication, and ensuring timely follow-up on collaborative initiatives.

Year 2 Pilot Programmes

Objectives

- Launch flagship pilot projects in priority sectors
- Convene first India-Kenya Business Delegation
- Begin MSME and agri-cold-chain pilots

Key Activities

- MSME digital-lending pilot with 2-3 Indian NBFC/fintech partners
- Cold-chain/agri-processing pilot in 2-3 counties
- First CCI India-led Business Delegation to Nairobi
- Pharma B2B buyer-seller meet

Stakeholders

- MSME loans disbursed via pilot
- Reduction in post-harvest loss in pilot value chain
- Number of delegation-generated deal leads

Risk Mitigation

Implement projects through a structured phased pilot approach with clearly defined objectives, performance indicators, and success milestones before moving towards large-scale deployment. Utilise blended concessional finance mechanisms to reduce early-stage investment risks, encourage private-sector participation, improve investor confidence, and enhance the long-term financial and operational sustainability of projects.

Year 3 Scale-Up

Objectives

- Scale successful pilots to additional counties/sectors
- Convene first India-Kenya CEO Forum
- Support first manufacturing/pharma investment decision

Key Activities

- Expand MSME lending and agri pilots to additional counties
- Convene inaugural CEO Forum alongside JTC/major bilateral visit
- Support at least one Indian pharmaceutical or manufacturing JV investment decision

Stakeholders

- Number of counties covered by scaled pilots
- CEO Forum attendance and outcomes
- Investment decisions supported

Risk Mitigation

Currency and regulatory risk managed through structured due-diligence support and coordination with Indian Exim Bank financing instruments.

Year 4 Deepening

Objectives

- Operationalise Skill Development Centres of Excellence
- Support PPP-structured infrastructure investment
- Deepen Digital Public Infrastructure cooperation

Key Activities

- Launch 2-3 Skill Development Centres of Excellence (agriculture, healthcare, ICT)
- Support a PPP-structured infrastructure project (housing or logistics)
- Advance DPI Working Group interoperability pilot

Stakeholders

- Number of students/professionals trained
- PPP project financial close achieved (Y/N)

Risk Mitigation

Ensure the long-term sustainability of Skill Development Centres through employer-linked curriculum design, industry partnerships, regular curriculum updates, and placement-driven training models that align with market demand. PPP-related risks can be mitigated through a phased implementation approach, government co-guarantees, clear risk-sharing frameworks, and strong institutional oversight to improve investor confidence and project sustainability.

Year 5 Consolidation & Review

Objectives

- Assess five-year impact against KPIs
- Renew institutional partnership for next phase
- Publish public impact report

Key Activities

- Conduct comprehensive impact assessment across all Councils and pilots
- Renew/refresh CCI India-Kenya institutional MoU
- Publish updated Knowledge Report with five-year outcomes and next-phase targets

Stakeholders

- Cumulative trade/investment facilitated vs. baseline
- Number of active JVs/partnerships sustained

Risk Mitigation

Independent evaluation should be commissioned to ensure an objective assessment of programme outcomes, effectiveness, implementation progress, and overall impact. The evaluation findings should be used to identify areas for improvement, strengthen future strategies, enhance accountability, and support the revision of five-year targets and priorities for the subsequent implementation cycle.

10. Strategic Recommendations

1. Recommendations for the Embassy of Kenya

- Formalise a strategic partnership with CCI India through an MoU and dedicated liaison officers.
- Actively participate in CCI India's Sector Councils, business forums, and policy dialogues through the High Commissioner, Commercial Wing, and trade officials.

2. Recommendations for the Government of Kenya

- Accelerate conclusion of the exploratory India-Kenya FTA to formalise improved market access and address the trade-balance asymmetry.
- Expand SRVA/local-currency-settlement adoption among Kenyan banks to reduce dollar-dependency in bilateral trade.

3. Recommendations for the Government of India

- Expand Exim Bank Lines of Credit for Kenyan infrastructure, agriculture-mechanisation and water-supply projects.
- Support Kenya's International Solar Alliance framework participation with technical and, where appropriate, concessional-finance assistance.
- Deepen ITEC scholarship allocation for Kenyan professionals in priority sectors identified in this report.

4. Recommendations for Indian Businesses

- View Kenya as a strategic gateway to the East African Community (EAC), COMESA, and the African Continental Free Trade Area (AfCFTA) rather than only as a bilateral export destination.
- Prioritise local partnerships, joint ventures, and value-added manufacturing investments instead of relying solely on exports.

5. Recommendations for Kenyan Businesses

- Engage proactively with CCI India's Sector Councils, trade delegations, buyer-seller meets, and business networking platforms to gain access to Indian technology, investment, markets, and strategic partnerships.
- Strengthen compliance with international quality standards, certification requirements, and documentation procedures to fully benefit from trade facilitation mechanisms such as BIS–KEBS cooperation and CBIC–KRA customs collaboration.
- Explore joint ventures with Indian companies for technology transfer, manufacturing, agribusiness, pharmaceuticals, ICT, healthcare, and renewable energy projects.

CONCLUSION

India and Kenya are entering the second half of the 2020s with their bilateral economic partnership on a positive and upward trajectory. Growing trade engagement, stronger institutional frameworks such as the Joint Trade Committee, improving investment cooperation, and initiatives towards local-currency settlement reflect the commitment of both countries to build a deeper and more resilient economic relationship. The shared interest in exploring a future Free Trade Agreement further highlights the strategic importance of expanding cooperation across trade, investment, and development sectors.

Kenya's role as East Africa's financial, logistics, and digital-economy hub creates significant opportunities for collaboration with India. Its development priorities, including industrial growth, infrastructure expansion, healthcare access, food security, digital transformation, and skills development, align closely with India's capabilities in manufacturing, pharmaceuticals, digital public infrastructure, agricultural technology, renewable energy, and entrepreneurship development. This alignment provides a strong foundation for creating value-driven partnerships that benefit businesses and communities in both countries.

Within this evolving landscape, the Chamber of Commerce and Industry of India (CCI India) is well positioned to act as a strategic bridge between Indian and Kenyan stakeholders. Leveraging its experience in business forums, policy engagement, investment facilitation, and international collaborations, CCI India can help translate bilateral momentum into practical business opportunities. Through sector-specific councils, a CEO Forum, MSME Partnership Cell, Skill Development Centres, and structured investment platforms, CCI India can strengthen institutional linkages and encourage greater participation from businesses, investors, and entrepreneurs.

The future of India-Kenya cooperation should extend beyond individual business transactions towards building a sustainable ecosystem for trade, investment, innovation, and knowledge exchange. By facilitating meaningful partnerships, promoting market access, supporting entrepreneurship, and enabling technology collaboration, CCI India can contribute to the creation of a long-term framework for inclusive economic growth. Through sustained institutional cooperation and a partnership-driven approach, India and Kenya can unlock new opportunities, enhance economic resilience, and establish a model of mutually beneficial cooperation that delivers lasting value for businesses, industries, and citizens of both nations.

THANK YOU

CCI India sincerely Thanks Your Excellency for the warm hospitality and gracious interaction with our team. We greatly value the opportunity to discuss strengthening bilateral trade and economic relations between India and Kenya and look forward to deepening cooperation, facilitating greater business engagement, and creating new opportunities for trade and investment between the two countries.
