

Building Bridges, Creating Opportunities, Shaping Tomorrow

Confidential and Proprietary
August 2026

Foreword

Singapore occupies a distinctive position in the global economy. As a compact and highly developed city-state, it has established enduring strengths in financial services, advanced manufacturing, international trade, technology, logistics and global connectivity. At the same time, its constraints of land, population and natural resources have shaped an outward-looking economic strategy focused on international partnerships, innovation and integration with global value chains.

India and Singapore share a longstanding Strategic Partnership, supported by the India-Singapore Comprehensive Economic Cooperation Agreement (CECA), strong investment linkages and an expanding agenda of cooperation across digitalisation, advanced manufacturing, skills development, sustainability, healthcare, infrastructure and connectivity. Singapore remains an important investment partner for India and a strategic gateway to the wider ASEAN region, while India offers Singapore access to a vast and growing market, a deep talent pool, expanding manufacturing capabilities and a dynamic technology ecosystem.

The Knowledge Paper examines, in a structured and evidence-based manner, how CCI India can serve as a strategic bridge between Singapore's capital, technology, innovation and global business capabilities and India's market, manufacturing strengths and talent base. It presents a sector-wise assessment across fifteen priority areas, maps key institutional and business stakeholders, and outlines a practical roadmap of initiatives, priorities and actions for strengthening India-Singapore economic and business engagement.

The paper is intended to serve as a valuable reference for CCI India's engagement with Singaporean government agencies, business chambers, industry leaders and enterprises. It also seeks to support Indian businesses in identifying opportunities for trade, investment, technology partnerships, market expansion and deeper integration with Singapore and the wider ASEAN region.

A handwritten signature in black ink, appearing to read "Munindra Kumar".

SINGAPORE

“

Explore a dynamic city where cultures blend seamlessly. Every moment reflects innovation, diversity, and urban sophistication.

Basic Facts and Demographics

Singapore is a highly developed city-state in Southeast Asia with a population of about 6 million people and is recognized as a major global financial and trade hub. Its official currency is the Singapore Dollar (SGD), and due to its strategic location, efficient governance, and strong global connectivity,

The country is known for its multicultural population, with major ethnic groups including Chinese, Malay, and Indian communities living harmoniously. It has four official languages—English, Malay, Mandarin, and Tamil—reflecting its cultural diversity. Singapore also boasts a high standard of living, excellent healthcare, and a world-class education system. Its urban planning, cleanliness, and safety make it one of the most livable cities in the world.

Economic Landscape and Gross Domestic Product (GDP)

Singapore's GDP is approximately USD 600 billion, reflecting its strong and stable economy. The country's economic landscape is highly diversified, with key sectors including finance, global trade, logistics, and advanced manufacturing driving growth. It consistently ranks among the most competitive and business-friendly economies in the world due to its strong institutions, transparent governance, and world-class infrastructure. In addition, Singapore benefits from a highly skilled workforce and a strategic location that facilitates international commerce. Its pro-business policies, low corruption levels, and emphasis on innovation and technology further strengthen its position as a leading global economic hub.

The primary sectors contributing to GDP are:

Services: The service sector dominates, including banking, finance, tourism, and global trade services. It contributes the largest share to GDP and employment.

Industry: Key industries include electronics, chemicals, and precision engineering, supported by advanced technology and innovation.

Agriculture: Agriculture contributes minimally due to limited land, with a focus on imports and food security strategies.

“ Culture and Heritage

The culture and heritage of Singapore reflect a vibrant blend of Chinese, Malay, Indian, and Western influences, shaped by its history as a global trading hub. This multicultural diversity is seen in its languages, religions, festivals, and cuisine, where traditions coexist harmoniously. Cultural districts like Chinatown, Little India, and Kampong Glam highlight this rich mix. Strong values of community, discipline, and modernity define Singaporean society.

India–Singapore Bilateral Trade and Economic Ties

India and Singapore share strong bilateral trade and economic ties, with Singapore being the largest sources of foreign direct investment (FDI) in India. Bilateral trade exceeds USD 34 billion and is supported by the Comprehensive Economic Cooperation Agreement (CECA), which enhances trade and investment flows. Singapore also serves as a key financial and investment gateway for Indian companies looking to expand into Southeast Asia. Cooperation extends to sectors such as technology, infrastructure, fintech, and smart cities, strengthening economic integration.

Economic Ties and Connectivity

India and Singapore share strong economic ties supported by excellent air and maritime connectivity, which enables smooth and efficient trade flows. Singapore acts as a key financial gateway for investments into India and other Asian markets. In addition, robust shipping links through major ports and frequent direct flights strengthen business, tourism, and corporate exchanges between the two countries. This connectivity further supports regional supply chains and enhances economic cooperation across multiple sectors.

Key Players in Import and Export

Traders:

Multinational corporations and global trading firms play a dominant role in international trade.

Industries:

Finance, logistics, and high-tech manufacturing industries are key contributors to exports and services.

Logistics:

The Port of Singapore is one of the busiest and most efficient in the world, supporting global trade networks.

Government:

Pro-business policies, trade agreements, and investment frameworks drive economic growth.

Trade Balance and Key Export–Import Commodities

Singapore maintains a strong and dynamic trade balance, supported by its position as a global trading hub. Its exports mainly include electronics, machinery, chemicals, refined petroleum products, and financial services, which are key drivers of its economy. Singapore is also one of the world's leading exporters of high-tech goods and plays a major role in re-export trade due to its strategic port location. On the import side, it brings in crude oil, machinery, food products, and raw materials needed for processing and re-export. Its extensive global trade network and free trade agreements enhance its connectivity with major economies such as China, the United States, and regional ASEAN countries.

1. Singapore: Country and Economic Overview

1.1 Geography and Political System

The Republic of Singapore is an island city-state located at the southern tip of the Malay Peninsula, at the crossroads of major East-West shipping lanes connecting the Indian Ocean and the South China Sea via the Strait of Malacca. Singapore has a total land area of approximately 734 square kilometres, making it one of the smallest sovereign states in the world by land area, a constraint that shapes nearly every dimension of its economic strategy, from housing and food policy to industrial land allocation.

Singapore is a parliamentary republic with a Westminster-style system of government. The President serves as Head of State, while executive authority rests with the Prime Minister and the Cabinet, drawn from the party or coalition commanding a majority in Parliament. Singapore has been governed continuously by the People's Action Party (PAP) since independence in 1965, providing a long record of policy continuity that has underpinned its economic development model.

1.2 Population and Demographics

Singapore's total population, comprising citizens, permanent residents and non-resident workers and dependents, stood at approximately 6.11 million in 2025, according to Singapore Department of Statistics data compiled by Trading Economics. The resident population (citizens and permanent residents) forms a smaller subset of this total. Singapore's demographic profile is characterised by low fertility and a rapidly ageing citizen population, a structural challenge examined in detail in the chapter on Singapore's major challenges.

1.3 Economic Model and Structure

Singapore operates one of the world's most open, trade-dependent economies. Its Gross Domestic Product was approximately US\$ 572-573 billion in nominal terms in 2024, with GDP growth of approximately 4.4% in 2024 moderating to an estimated 2.0% in 2025 amid a more uncertain global trade environment. Singapore's GDP per capita places it among the highest in the world on a nominal basis, reflecting its status as an advanced, high-income economy.

By sector, services account for the large majority of Singapore's GDP, with the balance concentrated in advanced manufacturing (notably electronics, semiconductors, precision engineering, biomedical manufacturing, and chemicals) and a very small agriculture sector reflecting the country's land constraints. Singapore's main industries include electronics, financial services, information and communications technology, civil engineering, petroleum refining and trading, chemical products, biomedical products, marine and offshore engineering, and re-export trade.

1.4 Trade Orientation and Global Connectivity

Singapore's trade-to-GDP ratio is among the highest of any economy in the world, reflecting its role as an entrepot and re-export hub. The Port of Singapore is one of the world's busiest container ports and transshipment hubs, and Changi Airport is a leading global air cargo and passenger hub. Singapore is a member of the World Trade Organization, APEC, the Comprehensive and Progressive Agreement for Trans-Pacific Partnership (CPTPP), the Regional Comprehensive Economic Partnership (RCEP), and ASEAN, and has one of the largest networks of bilateral and regional free trade agreements of any economy in the world.

1.5 Business Environment and Global Competitiveness

Singapore consistently ranks among the world's most competitive and business-friendly economies, reflecting political stability, rule of law, low corruption (Singapore scored 84 out of 100 on Transparency International's 2024 Corruption Perceptions Index, placing it among the least corrupt countries globally), efficient regulation, strong intellectual property protection, and a highly skilled workforce. These attributes make Singapore the preferred regional headquarters location for a large number of multinational corporations operating across ASEAN and the wider Asia-Pacific region.

1.6 Financial Centre Status

Singapore is one of the world's leading international financial centres, alongside New York, London and Hong Kong, anchored by the Monetary Authority of Singapore (MAS), which functions simultaneously as the central bank and integrated financial regulator. Singapore's financial sector encompasses banking, asset management, insurance, capital markets, FinTech and a growing wealth management industry serving both regional and global clients.

1.7 Technology and Innovation Ecosystem

Singapore has invested heavily in building a technology and innovation ecosystem through agencies including the Agency for Science, Technology and Research), Enterprise Singapore, and the Economic Development Board (EDB), alongside targeted national initiatives in artificial intelligence, quantum technology, cybersecurity and space technology, the last now coordinated through the newly established National Space Agency of Singapore (NSAS). Singapore's Smart Nation programme has positioned the country as a regional leader in digital government and digital economy infrastructure.

1.8 Singapore's Role in ASEAN

Singapore functions as the de facto financial, legal and business services capital of ASEAN and is frequently the preferred base for multinational and Indian companies seeking a regional headquarters for Southeast Asian operations.

2. India-Singapore Relations

2.1 Overview of the Strategic Partnership

India and Singapore established diplomatic relations shortly after Singapore's independence and have since built one of India's most substantive and multi-dimensional partnerships in Southeast Asia. The relationship was elevated to a Strategic Partnership, and is supported today by more than twenty regular bilateral mechanisms, dialogues and exercises spanning trade, defence, education, technology, urban planning and skills development.

2.2 Trade Relations and the CECA

The India-Singapore Comprehensive Economic Cooperation Agreement (CECA), signed on 29 June 2005, was Singapore's first comprehensive economic agreement with a South Asian country and remains the cornerstone of the bilateral economic relationship. CECA covers trade in goods, rules of origin, customs cooperation, mutual recognition of standards, investment protection, trade in services and movement of professionals, air services, e-commerce, intellectual property, and cooperation in science and technology, education and media.

Bilateral trade expanded from approximately US\$ 6.7 billion in FY 2004-05, before CECA, to approximately US\$ 35.6 billion in FY 2023-24. In FY 2024-25, bilateral trade stood at approximately US\$ 34.3 billion, a decline of about 3.7% over the previous year; India's imports from Singapore in FY 2024-25 were approximately US\$ 21.3 billion, while India's exports to Singapore stood at approximately US\$ 13.0 billion. Singapore has for many years ranked among India's leading sources of foreign direct investment, reflecting both genuine Singapore-based investment and investment routed through Singapore by global investors.

2.3 Recent High-Level Developments

The bilateral relationship has seen significant high-level momentum through 2025. On 4 September 2025, Prime Minister Narendra Modi and Singapore Prime Minister Lawrence Wong agreed to fast-track reviews of the India-Singapore CECA and the ASEAN-India Trade in Goods Agreement, with a view to boosting bilateral trade amid global tariff uncertainty and expanding cooperation across advanced manufacturing, digital technologies and regional economic integration. On 3 October 2025, India's Minister of Commerce and Industry, Mr. Piyush Goyal, visited Singapore for three days, meeting Prime Minister Wong and other leaders to discuss deepening cooperation in manufacturing, infrastructure, the green economy and industrial collaboration.

The second round of the India-Singapore Ministerial Roundtable (ISMR) was held in Singapore on 26 August 2024, reviewing progress on the four pillars identified at the inaugural ISMR (held on 17 September 2022 in New Delhi) covering digitalisation, skills development, sustainability, and healthcare and medicine, and introducing two additional pillars: advanced manufacturing and connectivity. This expansion of the ISMR framework signals the direction in which both governments intend to deepen cooperation and is directly relevant to several of the priority sectors examined later in this paper, particularly ICT, Manufacturing, Healthcare and Sustainability.

2.4 Other Bilateral Agreements and Mechanisms

Beyond CECA, India and Singapore have concluded a Double Taxation Avoidance Agreement (amended in 2005), a Bilateral Air Services Agreement, a Defence Cooperation Agreement, a Mutual Legal Assistance Treaty, and a Mutual Recognition Agreement on Nursing, among other instruments. Institutional support for the trade and investment relationship has also come from industry bodies, with the India-Singapore Parliamentary Forum and the Singapore-India Partnership Foundation actively supported by India's national chambers, including the Federation of Indian Chambers of Commerce and Industry (FICCI), the Confederation of Indian Industry (CII), and the Singapore Business Federation (SBF).

2.5 What Is Already Working, and Where CCI India Can Add Value

The bilateral relationship already benefits from a strong institutional architecture: a comprehensive trade agreement under active review, an established ministerial dialogue mechanism with an expanding set of priority pillars, deep investment flows, and active engagement from India's established national chambers. What is comparatively less developed is sector-specific, execution-focused engagement that connects individual Singapore agencies and companies with Indian states, sectoral clusters and companies on a sustained basis, translating high-level dialogue and framework agreements into concrete matchmaking, investment facilitation and delegation outcomes.

This is the space in which CCI India can add distinctive value: not by duplicating the framework-level work already carried out by the Ministry of Commerce and Industry, FICCI, CII and the Singapore Business Federation, but by building focused, sector-specific engagement mechanisms; by acting as an execution partner that converts the priority pillars identified under the ISMR (digitalisation, skills development, sustainability, healthcare and medicine, advanced manufacturing and connectivity) into concrete business outcomes; and by offering Singapore agencies and companies a dedicated, responsive point of contact for market entry into India. It can further serve as a bridge between Indian enterprises and Singaporean stakeholders, facilitating targeted matchmaking, investment opportunities, technology partnerships and long-term commercial relationships.

3. The High Commission of the Republic of Singapore in New Delhi

3.1 High Commission, Not Embassy: A Note on Terminology

Singapore's diplomatic mission in India is correctly referred to as the High Commission of the Republic of Singapore, not the Embassy of Singapore. Under the conventions of the Commonwealth of Nations, of which both India and Singapore are members, diplomatic missions exchanged between Commonwealth member states are termed High Commissions and are headed by a High Commissioner, while the term Embassy is reserved for missions exchanged with non-Commonwealth states. This paper uses the correct terminology throughout and recommends that CCI India's own communications, correspondence and event materials consistently refer to the Singapore mission in New Delhi as the High Commission of the Republic of Singapore.

3.2 Location and Establishment

The High Commission of the Republic of Singapore in New Delhi was established in March 1967. Since 1 April 1985, it has been located in its present chancery complex in the Chanakypuri Diplomatic Enclave, on a 3.027-acre plot approximately 8 kilometres from New Delhi's main administrative and commercial centres and approximately 14 kilometres from Indira Gandhi International Airport.

3.3 Current Leadership and Structure

As of the most recent verification of the High Commission's official page (last updated 22 June 2026), the High Commissioner of the Republic of Singapore to India is Mr. Simon Wong. The Deputy High Commissioner is Ms. Sumaya Baqavi. The mission's structure also includes a Counsellor (Administration and Consular), a Counsellor, a Defence Adviser, and a First Secretary (Political), among other officers covering the mission's political, economic, commercial, consular and defence functions.

3.4 Functions of the High Commission

Political and Diplomatic Role

The High Commission represents the Government of Singapore in its political and diplomatic relationship with the Government of India, supporting high-level visits, bilateral dialogues and the broader Strategic Partnership architecture, including preparation for ISMR sessions and related ministerial engagements.

Economic and Commercial Role

The High Commission promotes Singapore's trade and investment interests in India through government agencies and partnerships with Indian ministries, states, and industry bodies.

Consular Role

The High Commission provides consular services to Singapore citizens in India and processes visa and related applications for Indian nationals travelling to Singapore, in coordination with Singapore's Immigration and Checkpoints Authority.

3.5 How CCI India Can Engage with the High Commission

CCI India's most direct institutional touchpoint for Singapore-related engagement is the High Commission of the Republic of Singapore in New Delhi. Potential engagement channels include structured briefings and roundtables hosted jointly with the High Commission's economic and commercial officers, participation in High Commission-led trade and investment events, formal introductions to Enterprise Singapore and EDB personnel where the High Commission maintains liaison relationships, and support for outbound Indian business delegations seeking introductions to Singapore Government counterparts.

Singapore's national strategy is organised around a small number of durable priorities that recur across its Budget statements, its Green Plan, its Manufacturing 2030 vision, and its Smart Nation programme. These priorities frame where Singapore is actively seeking international partners, and therefore where CCI India can most productively focus its engagement.

4. Singapore Strategic Priorities

4.1 Economic Diversification and Resilience

Singapore continues to diversify its economic base beyond its traditional pillars of trade, finance and electronics manufacturing, building deeper capabilities in semiconductors, biomedical sciences, aerospace, sustainability-linked industries and digital services, while pursuing supply-chain resilience in the face of geopolitical and trade fragmentation risk.

4.2 Advanced Manufacturing 2030

Under its Manufacturing 2030 vision, Singapore's Economic Development Board (EDB) aims to increase manufacturing sector value-add by 50% between 2020 and 2030, driven by semiconductors, aerospace, biomedical sciences, and precision engineering. Singapore is already a major global manufacturing hub, accounting for roughly one in ten semiconductor chips, around one-fifth of global semiconductor equipment production, and approximately 10% of global aerospace MRO output. This strategic focus strengthens Singapore's position as a global advanced-manufacturing hub. It also creates opportunities for deeper collaboration with Indian companies in technology, skills, supply chains, and industrial innovation.

4.3 Smart Nation and the Digital Economy

Singapore's Smart Nation programme continues to prioritise digital government services, digital identity, cybersecurity, and the responsible adoption of artificial intelligence across the economy, positioning Singapore as a regional testbed and reference market for digital transformation.

4.4 Sustainability and the Green Economy

The Singapore Green Plan 2030, launched on 10 February 2021, sets out five pillars, City in Nature, Energy Reset, Sustainable Living, Green Economy and Resilient Future, supporting Singapore's goal of achieving net-zero emissions by 2050. Singapore also aims to position itself as a leading regional hub for green finance, carbon services and sustainability solutions.

4.5 Regional and Global Connectivity

Singapore continues to invest in its position as ASEAN's principal financial, trading, legal and logistics hub, and as the preferred regional headquarters location for multinational and increasingly Indian companies expanding into Southeast Asia, while deepening bilateral and plurilateral trade relationships including CPTPP and RCEP.

4.6 Workforce Renewal and Skills

Given its demographic constraints, Singapore places sustained emphasis on skills upgrading (through SkillsFuture and related national schemes), attracting and retaining global talent, and preparing its workforce for the structural changes brought about by artificial intelligence and automation.

5. Singapore's Major Challenges

Singapore's structural challenges are the flip side of its strategic priorities. Each challenge below is analysed using a consistent framework: Challenge and Impact, Singapore's Response, the Opportunity for International Cooperation, the Potential India Contribution, and the CCI India Role.

5.1 Demographic Ageing and Workforce Constraints

Singapore's citizen population is ageing rapidly and fertility remains below replacement level, tightening the domestic labour supply and increasing pressure on healthcare and eldercare systems even as the total resident-plus-non-resident population reached approximately 6.11 million in 2025. This demographic shift is accelerating demand for productivity-enhancing technologies, skilled talent and sustainable healthcare.

Dimension	Detail
Singapore's Response	Singapore continues to raise the retirement and re-employment age, expand eldercare infrastructure, and rely on a calibrated inflow of foreign professionals and skilled workers to supplement its workforce.
Opportunity for International Cooperation	Partnerships that supply skilled talent, healthcare professionals, eldercare service models and workforce-training pipelines calibrated to Singapore's needs and immigration framework.
Potential India Contribution	India's large, young, English-speaking, increasingly skilled talent pool in healthcare, nursing, IT, engineering and eldercare services, supported by the existing India-Singapore Mutual Recognition Agreement on Nursing.
CCI India Role	Facilitate structured talent and training partnerships between Indian skilling institutions/healthcare training bodies and Singapore healthcare and eldercare operators (PROPOSED).

5.2 Land Constraints and Urban Density

With a total land area of only around 734 square kilometres and among the highest population densities in the world, Singapore faces continuous pressure on housing, industrial land, food production and infrastructure capacity.

Dimension	Detail
Singapore's Response	Singapore pursues land reclamation, underground and vertical space utilisation, and highly efficient urban planning through agencies such as JTC Corporation and the Urban Redevelopment Authority.
Opportunity for International Cooperation	Compact, land-efficient technologies in vertical farming, modular construction, underground infrastructure and smart building systems.
Potential India Contribution	India's growing base of AgriTech, PropTech and construction-technology companies offering land-efficient production and building solutions.
CCI India Role	Curate and introduce Indian AgriTech, vertical-farming and smart-construction companies to Singapore's land-constrained development agencies (PROPOSED).

5.3 Energy Security and Import Dependence

Singapore has no domestic energy resources and depends on imported natural gas for roughly 95% of its electricity generation, alongside a growing programme of cross-border clean electricity imports, creating structural exposure to global energy price and supply shocks.

Dimension	Detail
Singapore's Response	Singapore is diversifying its energy mix through solar deployment, regional clean-electricity import agreements (including with Indonesia, Cambodia and Vietnam for up to 5.6 GW by 2035), hydrogen exploration and carbon capture, while natural gas is expected to remain over 50% of the energy mix through 2035.
Opportunity for International Cooperation	Partnerships in solar manufacturing and deployment, green hydrogen, energy storage, and grid technology that support Singapore's energy diversification.
Potential India Contribution	India's rapidly scaling renewable energy, solar manufacturing and green hydrogen ecosystem, and its experience in large-scale grid management.
CCI India Role	Facilitate dialogue between Indian renewable energy and green hydrogen companies and Singapore's Energy Market Authority and EDB on supply and technology partnerships (PROPOSED).

5.4 Climate Change, Sea-Level Rise and Flood Resilience

As a low-lying island state, Singapore faces material exposure to sea-level rise, coastal flooding and rising urban temperatures, requiring sustained investment in coastal protection and climate-resilient infrastructure under the Green Plan's Resilient Future pillar.

Dimension	Detail
Singapore's Response	Singapore is developing long-term coastal protection plans for its City-East Coast, North-West Coast and Jurong Island frontage, alongside urban cooling and green-infrastructure measures.
Opportunity for International Cooperation	Cooperation in climate-resilient infrastructure engineering, coastal protection technology and climate risk modelling.
Potential India Contribution	India's engineering, infrastructure and climate-risk-analytics capabilities, and its own experience with coastal and urban climate adaptation.
CCI India Role	Support technical exchanges between Indian infrastructure/engineering firms and Singapore's coastal protection programme stakeholders (PROPOSED).

5.5 Food Security and Import Dependence

Singapore imports over 90% of its food requirements, exposing it to global supply-chain disruption; the Singapore Green Plan 2030 sets a target ("30 by 30") of producing 30% of Singapore's nutritional needs locally and sustainably.

Dimension	Detail
Singapore's Response	The Singapore Food Agency (SFA) supports local production through AgriTech, vertical farming, aquaculture and alternative protein innovation, alongside active diversification of import sources.
Opportunity for International Cooperation	Diversified, resilient food-import partnerships and technology cooperation in AgriTech, aquaculture and food processing.
Potential India Contribution	India's position as a major agricultural producer and exporter (including rice, spices, marine products and processed foods), and its growing AgriTech and FoodTech start-up ecosystem.
CCI India Role	Establish structured engagement between Indian FPOs/agri-exporters/AgriTech firms and the SFA and Singapore food importers (PROPOSED), discussed further under Agriculture & Agribusiness.

5.6 Global Trade Vulnerability and Geopolitical Uncertainty

As one of the world's most trade-dependent economies, Singapore is highly exposed to global trade fragmentation, tariff escalation and geopolitical tensions among major economies, which can disrupt the re-export and logistics activity central to its economic model.

Dimension	Detail
Singapore's Response	Singapore is pursuing trade diversification through its extensive FTA network, deeper ASEAN integration, and, together with India, the fast-tracked review of the CECA and the ASEAN-India Trade in Goods Agreement announced in September 2025.
Opportunity for International Cooperation	Deeper trade and supply-chain partnerships with large, stable, growing markets outside the immediate zone of geopolitical tension.
Potential India Contribution	India's scale, growing manufacturing base and political stability position it as a natural trade-diversification partner for Singapore-based and Singapore-linked companies.
CCI India Role	Position CCI India as a facilitation channel for Singapore companies seeking to diversify supply chains and market access into India (PROPOSED).

5.7 Artificial Intelligence, Automation and Workforce Transformation

Rapid AI adoption and automation are reshaping job roles across Singapore's services and manufacturing sectors, requiring sustained reskilling investment to protect productivity and employment quality.

Dimension	Detail
Singapore's Response	Singapore has invested in national AI strategy initiatives, SkillsFuture reskilling programmes, and sector-specific automation adoption support for SMEs.
Opportunity for International Cooperation	Partnerships in AI training content, reskilling delivery, and joint AI research and development.
Potential India Contribution	India's large pool of AI and software engineering talent and its experience scaling digital skilling programmes.
CCI India Role	Facilitate India-Singapore AI skilling and joint R&D partnerships between Indian technology/education providers and Singapore institutes of higher learning (PROPOSED).

5.8 Rising Regional Competitiveness

Singapore faces intensifying competition for investment and manufacturing activity from China, India, Malaysia, Vietnam, Indonesia and other regional hubs offering lower costs or large domestic markets, requiring Singapore to continuously reinforce its value proposition on quality, IP protection, connectivity and ease of doing business.

Dimension	Detail
Singapore's Response	Singapore differentiates through high-value manufacturing, R&D intensity, regulatory quality, and its role as a regional headquarters and financial hub rather than competing on cost.
Opportunity for International Cooperation	Complementary partnership models where Singapore provides capital, R&D, finance and regional headquarters functions while manufacturing scale and cost-competitive production are located in partner markets such as India.
Potential India Contribution	India's manufacturing capacity and cost structure can complement, rather than compete head-on with, Singapore's high-value services and R&D functions.
CCI India Role	Promote a complementary "Singapore HQ plus India manufacturing/delivery" partnership model to Singapore companies through CCI India (PROPOSED).

5.9 Cost of Living and Business Costs

High land, labour and business costs in Singapore create ongoing pressure on cost-sensitive activities and on lower-income households, influencing corporate location decisions for cost-intensive functions.

Dimension	Detail
Singapore's Response	Singapore continues to move up the value chain into higher-margin, R&D-intensive and services-led activity, while offering targeted grants and incentives to offset cost pressures for strategic sectors.
Opportunity for International Cooperation	Partnerships that allow Singapore-based companies to locate cost-sensitive back-office, manufacturing or delivery functions in India while retaining strategic and R&D functions in Singapore.
Potential India Contribution	India's competitive cost structure across manufacturing, IT services and business process functions.
CCI India Role	Support Singapore companies in structuring an efficient Singapore-India operating footprint through CCI India's market-entry facilitation (PROPOSED).

5.10 Water and Natural Resource Constraints

Singapore has no natural freshwater sources of scale and manages its water security through the "Four National Taps" (local catchment, imported water, NEWater and desalination), requiring continuous investment in water technology and efficiency.

Dimension	Detail
Singapore's Response	Singapore continues to expand NEWater recycling capacity and desalination infrastructure, alongside efficiency measures across households and industry.
Opportunity for International Cooperation	Cooperation in water treatment technology, desalination, and industrial water efficiency, generally as a component of the Sustainability sector partnership.
Potential India Contribution	India's growing water-technology sector and experience managing water stress across a large and diverse geography.
CCI India Role	Introduce relevant Indian water-technology companies to Singapore's national water agency and industrial users where appropriate opportunities arise (PROPOSED).

6. Sector-Wise Analysis and CCI India Contribution

This chapter examines fifteen priority sectors for India-Singapore cooperation. Each sector is analysed against a consistent framework covering Singapore's position and strengths, Singapore's challenges, India's relevant capabilities and existing cooperation, what CCI India can do, specific proposed programmes and relevant Singapore institutions, and short/medium/long-term actions. All CCI India programmes referenced in this chapter that are not already in operation are explicitly PROPOSED CCI INDIA INITIATIVES.

6.1 FinTech

Singapore's Current Position and Strengths

Singapore is one of the world's leading FinTech hubs, anchored by the Monetary Authority of Singapore (MAS) as an integrated regulator and by a dense ecosystem of digital payments, digital banking, wealthtech, insurtech and regtech firms, reinforced annually by the Singapore FinTech Festival. Its strengths include regulatory sandboxes, deep capital markets, and status as ASEAN's financial gateway.

Singapore's Challenges

Rising costs, regulatory complexity across ASEAN markets, and the need to scale beyond Singapore's small domestic market to sustain FinTech growth and talent supply. Rising costs, regulatory complexity across ASEAN markets, and the need to scale beyond Singapore's small domestic market remain key challenges for FinTech growth and talent supply. Intense competition from regional FinTech hubs is increasing pressure on Singapore-based firms to innovate and expand internationally. Cybersecurity risks, data-protection requirements, and evolving digital-finance regulations are also raising compliance costs, while continued access to specialised technology talent remains essential for sustaining innovation and long-term sector growth.

India's Relevant Capabilities and Existing Cooperation

India operates the world's largest real-time digital payments system (UPI) and has one of the largest FinTech start-up ecosystems globally, with deep experience in financial inclusion, digital lending and regtech. Existing cooperation includes MAS-RBI dialogue on cross-border payment linkages and growing private-sector FinTech partnerships; there remains scope for deeper, execution-level engagement between Indian FinTech companies and Singapore's FinTech ecosystem.

What CCI India Can Do

CCI India can curate India-Singapore FinTech matchmaking, support Indian FinTech companies seeking a Singapore/ASEAN base, and connect Singapore wealthtech/insurtech firms with Indian financial inclusion and distribution networks.

Proposed CCI India Programmes / Institutions	Detail
Specific Programmes (PROPOSED)	India-Singapore FinTech Forum; India FinTech Market-Entry Desk for Singapore companies; Singapore Market-Entry Desk for Indian FinTech companies.
Relevant Singapore Institutions	Monetary Authority of Singapore (MAS); Enterprise Singapore; Singapore FinTech Association.

Horizon	Actions
Short-term	Map Indian FinTech companies with ASEAN ambitions and Singapore FinTech companies eyeing India; organise an initial roundtable.
Medium-term	Launch the India-Singapore FinTech Forum; support two to three matchmaking delegations.
Long-term	Institutionalise an annual India-Singapore FinTech dialogue alongside the Singapore FinTech Festival.

6.2 Information & Communications Technology (ICT)

Singapore's Current Position and Strengths

Singapore is a leading regional hub for cloud computing, data centres, cybersecurity and enterprise digital transformation, underpinned by its Smart Nation programme and strong digital infrastructure and connectivity. Its strengths include a trusted regulatory environment, deep connectivity, and status as the preferred APAC data-centre and cloud hub for many global technology companies.

Singapore's Challenges

Land and energy constraints limit further large-scale data-centre expansion within Singapore itself, and rising costs push routine software delivery activity offshore.

India's Relevant Capabilities and Existing Cooperation

India is a global leader in enterprise software delivery, cloud engineering, cybersecurity services and AI talent, with a rapidly maturing product and SaaS ecosystem. The ISMR's digitalisation pillar already frames government-to-government cooperation; there remains scope to connect Indian ICT and AI companies directly with Singapore enterprise buyers and with Singapore companies seeking India-based delivery capability.

What CCI India Can Do

CCI India can facilitate B2B matchmaking between Indian ICT/AI companies and Singapore enterprises, and support Singapore companies establishing India-based technology and delivery centres.

Proposed CCI India Programmes / Institutions	Detail
Specific Programmes (PROPOSED)	India-Singapore AI & Digital Transformation Forum; ICT Market-Entry Desk (bidirectional).
Relevant Singapore Institutions	Infocomm Media Development Authority (IMDA); Cyber Security Agency of Singapore; Enterprise Singapore.

Horizon	Actions
Short-term	Compile a directory of Indian ICT/AI companies aligned with Singapore's digitalisation priorities.
Medium-term	Launch the India-Singapore AI & Digital Transformation Forum with an initial roundtable and matchmaking session.
Long-term	Support the establishment of India-based delivery/R&D centres for Singapore-headquartered technology companies.

6.3 Biomedical, Healthcare & Pharmaceuticals

Singapore's Current Position and Strengths

Singapore hosts a world-class biomedical sciences base, with eight of the world's top ten biopharmaceutical companies conducting manufacturing or R&D activity in the country, alongside a sophisticated healthcare system and a growing medical technology cluster. Its strengths include strong IP protection, clinical research infrastructure, and government-backed biomedical R&D funding through A*STAR.

Singapore's Challenges

An ageing population raises healthcare demand and cost pressure, while Singapore's small population limits the scale of clinical trials and domestic manufacturing volumes achievable without external partners. This increases reliance on regional partnerships, international research networks, and cross-border healthcare collaborations to achieve greater scale and efficiency.

India's Relevant Capabilities and Existing Cooperation

India is one of the world's largest suppliers of generic pharmaceuticals and vaccines, has a fast-growing medical device and healthtech sector, and trains large numbers of healthcare professionals, supported by the existing India-Singapore Mutual Recognition Agreement on Nursing. The ISMR's healthcare and medicine pillar provides a government-level framework; execution-level opportunities remain in pharmaceutical manufacturing partnerships, clinical research collaboration and healthcare workforce mobility.

What CCI India Can Do

CCI India can connect Indian pharmaceutical, medical device and healthtech companies with Singapore's biomedical cluster, and facilitate healthcare workforce and training partnerships.

Proposed CCI India Programmes / Institutions	Detail
Specific Programmes (PROPOSED)	India-Singapore Healthcare & Pharma Forum; Healthcare Workforce & Training Partnership Desk.
Relevant Singapore Institutions	Health Sciences Authority (HSA); Economic Development Board (EDB) Biomedical Sciences cluster; A*STAR.

Horizon	Actions
Short-term	Map Indian pharma/medtech companies with export or R&D interest in Singapore.
Medium-term	Launch the India-Singapore Healthcare & Pharma Forum; pilot a healthcare workforce partnership.
Long-term	Support joint clinical research and pharmaceutical manufacturing partnerships.

6.4 Manufacturing

Singapore's Current Position and Strengths

Singapore is targeting a 50% increase in manufacturing sector value-add from 2020 to 2030 under its Manufacturing 2030 vision, anchored in semiconductors, aerospace, biomedical sciences, precision engineering and Industry 4.0 adoption. Its strengths include automation capability, a strong intellectual property regime, and deep integration with global supply chains.

Singapore's Challenges

Land scarcity and high costs constrain large-scale, labour-intensive manufacturing expansion within Singapore, pushing volume production to regional partners.

India's Relevant Capabilities and Existing Cooperation

India offers substantial manufacturing capacity, a growing base of Industry 4.0 and robotics capability, and a large domestic market under initiatives such as Production Linked Incentive schemes. The ISMR's advanced manufacturing pillar (added in the second ISMR round in August 2024) signals government-level intent.

What CCI India Can Do

CCI India can facilitate Singapore-India manufacturing supply-chain partnerships and support Indian manufacturers seeking Singapore-based regional distribution and finance.

Proposed CCI India Programmes / Institutions	Detail
Specific Programmes (PROPOSED)	India-Singapore Advanced Manufacturing Forum; Manufacturing Supply-Chain Partnership Desk.
Relevant Singapore Institutions	Economic Development Board (EDB); JTC Corporation; Enterprise Singapore.

Horizon	Actions
Short-term	Map Indian manufacturing clusters relevant to Singapore's Manufacturing 2030 priorities.
Medium-term	Launch the India-Singapore Advanced Manufacturing Forum; organise a sector-specific delegation.
Long-term	Support co-located Singapore-India manufacturing and supply-chain partnerships at scale.

6.5 Aerospace & Aviation

Singapore's Current Position and Strengths

Singapore is one of Asia's largest and most diverse aerospace ecosystems, home to over 130 aerospace companies and contributing approximately 10% of global aerospace MRO output, with aerospace output growing 16% year-on-year in 2023 and roughly 3,000 jobs added between 2021 and 2023. Its strengths include nose-to-tail MRO capability across major engine platforms (GE Aerospace, Pratt & Whitney, Rolls-Royce, CFM International), avionics manufacturing, and Changi Airport's status as a major regional air hub.

Singapore's Challenges

Land constraints limit further large-scale MRO facility expansion, and the sector faces a persistent skilled-technician talent shortage, with plans to hire more than 2,500 additional employees over the next three to five years. This shortage is further intensified by rising demand for aviation maintenance, repair, and overhaul services across the region.

India's Relevant Capabilities and Existing Cooperation

India has a fast-growing aviation market, an expanding domestic aerospace manufacturing and MRO base, and large-scale technical and engineering training capacity.

Cooperation to date has been largely commercial and company-led; there is scope for CCI India to build structured cooperation in MRO capacity-sharing, component manufacturing and aerospace technical training. Such collaboration could strengthen India–Singapore aerospace supply chains while creating opportunities for joint ventures, skill development, and technology transfer.

What CCI India Can Do

CCI India can connect Indian aerospace component manufacturers and MRO providers with Singapore's aerospace cluster, and support technical workforce partnerships.

Proposed CCI India Programmes / Institutions	Detail
Specific Programmes (PROPOSED)	India-Singapore Aerospace & Aviation Forum; Aerospace Technical Skills Partnership.
Relevant Singapore Institutions	Economic Development Board (EDB) Aerospace cluster; Civil Aviation Authority of Singapore (CAAS); Changi Airport Group.

Horizon	Actions
Short-term	Map Indian aerospace component and MRO companies with Singapore partnership potential.
Medium-term	Launch the India-Singapore Aerospace & Aviation Forum; pilot a technical skills exchange.
Long-term	Support joint MRO capacity-sharing and component supply-chain partnerships.

6.6 Construction & Infrastructure

Singapore's Current Position and Strengths

Singapore is a global reference market for smart, land-efficient urban infrastructure, smart buildings and construction technology, driven by agencies including JTC Corporation, the Building and Construction Authority (BCA) and the Urban Redevelopment Authority (URA). Its strengths include disciplined urban planning, strong construction quality standards, and leadership in green building certification (Green Mark).

Singapore's Challenges

Land scarcity, high construction costs and a persistent shortage of skilled construction labour and technicians constrain project delivery capacity.

India's Relevant Capabilities and Existing Cooperation

India has a large and growing construction and infrastructure sector, extensive engineering and project-management talent, and increasing capability in digital construction and Building Information Modelling (BIM). There is limited structured India-Singapore engagement specifically on construction technology and workforce; this represents a clear execution gap CCI India can fill.

What CCI India Can Do

CCI India can connect Indian construction-technology and engineering firms with Singapore's smart-building and infrastructure agencies, and support skilled construction workforce partnerships.

Proposed CCI India Programmes / Institutions	Detail
Specific Programmes (PROPOSED)	India-Singapore Construction Technology & Infrastructure Desk.
Relevant Singapore Institutions	Building and Construction Authority (BCA); JTC Corporation; Urban Redevelopment Authority (URA).

Horizon	Actions
Short-term	Map Indian construction-technology and BIM companies relevant to Singapore's smart-building priorities.
Medium-term	Organise an initial construction-technology roundtable and delegation.
Long-term	Support sustained construction workforce and technology partnerships.

6.7 Energy

Singapore's Current Position and Strengths

Singapore imports substantially all of its energy, relying on natural gas for approximately 95% of electricity generation, while pursuing solar deployment, cross-border clean electricity imports of up to 5.6 GW by 2035 from Indonesia, Cambodia and Vietnam, and exploration of hydrogen and carbon capture.

Its strengths include a stable, well-managed power grid, an established carbon tax framework, and ambitions to be a regional green-finance and carbon-services hub. It also supports the transition towards a low-carbon economy through renewable energy, sustainable infrastructure and clean-technology innovation.

Singapore's Challenges

Complete dependence on energy imports and severe land constraints on domestic renewable generation leave Singapore structurally exposed to regional energy security and pricing risk.

India's Relevant Capabilities and Existing Cooperation

India has one of the world's largest and fastest-growing renewable energy sectors, including solar manufacturing, and a deepening green hydrogen programme. Cooperation to date has been limited relative to Singapore's regional clean-energy import agreements with Southeast Asian neighbours; there is room for India to be considered as a longer-term technology and equipment partner even where direct electricity import is not feasible.

What CCI India Can Do

CCI India can facilitate dialogue between Indian solar/renewable-energy manufacturers and Singapore's Energy Market Authority and EDB, and support green hydrogen technology partnerships.

Proposed CCI India Programmes / Institutions	Detail
Specific Programmes (PROPOSED)	India-Singapore Energy Dialogue.
Relevant Singapore Institutions	Energy Market Authority (EMA); Economic Development Board (EDB); National Climate Change Secretariat.

Horizon	Actions
Short-term	Initiate a scoping dialogue on Indian renewable-energy equipment and green hydrogen technology relevant to Singapore's needs.

Horizon	Actions
Medium-term	Convene the India-Singapore Energy Dialogue with EMA and EDB participation.
Long-term	Support longer-term green hydrogen and clean-technology supply partnerships.

6.8 Tourism & Hospitality

Singapore's Current Position and Strengths

Singapore's tourism sector rebounded strongly, with 16.5 million international visitor arrivals in 2024 (a 21% increase over 2023) and tourism receipts projected to surpass S\$27.7 billion, with 2025 arrivals projected to reach 17-18.5 million.

Approaching the pre-pandemic 2019 record of 19.1 million. Its strengths include world-class MICE infrastructure, integrated resorts, a strong events calendar (including the Formula 1 Singapore Grand Prix and the Singapore FinTech Festival), and status as a regional medical tourism destination.

Singapore's Challenges

Land constraints limit large-scale new hospitality development, and rising costs put pressure on Singapore's price competitiveness relative to regional destinations.

India's Relevant Capabilities and Existing Cooperation

India is one of the world's largest outbound and inbound tourism markets, with a fast-growing MICE and business-travel segment and deep cultural tourism assets. India is already a significant source market for Singapore tourism; there is scope to deepen cooperation in MICE partnerships, tourism technology and two-way business tourism promotion. Stronger collaboration can also encourage joint destination marketing, curated business events and premium travel experiences. Enhanced air connectivity, digital travel solutions and integrated tourism packages can further strengthen two-way visitor flows and commercial engagement.

What CCI India Can Do

CCI India can support joint India-Singapore MICE promotion and connect Indian tourism-technology and hospitality companies with Singapore's tourism ecosystem.

Proposed CCI India Programmes / Institutions	Detail
Specific Programmes (PROPOSED)	India-Singapore Tourism & MICE Partnership Desk.

Proposed CCI India Programmes / Institutions	Detail
Relevant Singapore Institutions	Singapore Tourism Board (STB); Singapore Business Federation (SBF).

Horizon	Actions
Short-term	Support outbound Indian business-tourism and MICE delegations to Singapore events.
Medium-term	Formalise a tourism and MICE partnership desk with STB engagement.
Long-term	Support joint India-Singapore tourism-technology and destination-marketing initiatives.

6.9 International Trade

Singapore's Current Position and Strengths

Singapore is a leading global trading and re-export hub with one of the highest trade-to-GDP ratios in the world, anchored by the Port of Singapore (among the world's busiest transshipment ports) and Changi Airport, and by an extensive network of bilateral and regional trade agreements including CPTPP and RCEP. Its strengths include trade finance depth, logistics excellence, and its role as the principal gateway connecting global trade flows with ASEAN.

Singapore's Challenges

Rising global trade fragmentation, tariff uncertainty and intensifying regional competition for transshipment and logistics activity pose ongoing risk to Singapore's trade-hub model.

India's Relevant Capabilities and Existing Cooperation

India offers a large and growing domestic market, an expanding manufacturing export base, and a shared interest in a fast-tracked CECA review and ASEAN-India Trade in Goods Agreement review, as agreed by Prime Ministers Modi and Wong in September 2025. The CECA review process itself is the principal existing mechanism; CCI India's role is to translate the outcomes of that review into concrete trade-facilitation opportunities for companies on both sides.

What CCI India Can Do

CCI India can position Singapore as an ASEAN gateway for Indian exporters and support Singapore trading companies seeking direct India market access ahead of, and following, the CECA review.

Proposed CCI India Programmes / Institutions	Detail
Specific Programmes (PROPOSED)	India-Singapore Trade Facilitation Desk; "India via Singapore to ASEAN" corridor initiative.
Relevant Singapore Institutions	Enterprise Singapore; Ministry of Trade and Industry (MTI); Singapore Business Federation (SBF).

Horizon	Actions
Short-term	Track the CECA/ASEAN-India Trade in Goods Agreement review process and prepare a business-community briefing.
Medium-term	Launch the India-Singapore Trade Facilitation Desk.
Long-term	Institutionalise the ASEAN gateway corridor initiative for Indian exporters.

6.10 Oil & Gas

Singapore's Current Position and Strengths

Singapore is one of the world's top three oil refining centres, processing over 1.5 million barrels of crude oil per day on Jurong Island despite having no domestic crude reserves, and recorded record marine fuel (bunkering) sales of approximately 51.8 million tonnes in 2025, making it the world's largest bunkering port. Its strengths include integrated refining and petrochemical infrastructure, deep trading and price-discovery expertise, and a transition framework offering carbon tax rebates of up to 76% (for 2024-2025) to emissions-intensive, trade-exposed facilities.

Singapore's Challenges

Singapore's refining sector faces margin pressure from larger, more integrated refining-petrochemical complexes emerging in China, India and the Middle East, alongside layoffs and asset rationalisation amid the current oil and gas down-cycle.

India's Relevant Capabilities and Existing Cooperation

India has a large and growing refining and petrochemical sector and deep experience in energy trading, and is itself a significant destination for Singapore-linked energy investment and trading relationships.

What CCI India Can Do

CCI India can facilitate dialogue between Indian oil and gas majors and Singapore's energy-trading and refining ecosystem on decarbonisation technology and trading partnerships.

Proposed CCI India Programmes / Institutions	Detail
Specific Programmes	India-Singapore Energy Trading & Decarbonisation Dialogue.
Relevant Singapore Institutions	Economic Development Board (EDB) Energy & Chemicals cluster; Jurong Town Corporation (JTC); Enterprise Singapore.

Horizon	Actions
Short-term	Convene an initial dialogue between Indian energy majors and Jurong Island stakeholders.
Medium-term	Support Indian participation in Singapore's refinery decarbonisation transition initiatives.
Long-term	Explore longer-term trading and technology-transfer partnerships.

6.11 Mining & Minerals

Singapore's Current Position and Strengths

Singapore has negligible domestic mineral resources and is not a mining economy; its relevance in this sector lies instead in its role as a regional hub for commodity trading, commodity finance and mineral supply-chain and trade-finance services, leveraging its financial-centre status and trading expertise. Its strengths are trade finance depth, a trusted legal and arbitration framework for commodity contracts, and connectivity to both global and regional commodity markets.

Singapore's Challenges

Singapore's limited domestic resource base means it must continuously reinforce its position as a trading and financing hub rather than a resource-producing one, and faces competition from other regional and global commodity-trading centres.

India's Relevant Capabilities and Existing Cooperation

India has a substantial domestic mineral base and a growing strategic interest in critical minerals for its manufacturing and clean-energy ambitions, alongside an expanding mineral-processing and trading sector. Cooperation to date has been limited and largely transactional; there is a clear opportunity for CCI India to connect India's critical-minerals strategy with Singapore's commodity-trading and finance ecosystem.

What CCI India Can Do

CCI India can connect Indian critical-minerals and mineral-processing companies with Singapore's commodity-trading and finance community, distinguishing clearly between domestic mining capability (which sits in India) and Singapore's trading/finance role.

Proposed CCI India Programmes / Institutions	Detail
Specific Programmes (PROPOSED)	India-Singapore Critical Minerals Trade & Finance Dialogue.
Relevant Singapore Institutions	Enterprise Singapore; Monetary Authority of Singapore (MAS) (commodity trading/finance regulation).

Horizon	Actions
Short-term	Scope Indian critical-minerals companies with interest in Singapore-based trading or financing structures.
Medium-term	Convene an initial critical-minerals trade and finance dialogue.
Long-term	Support longer-term commodity-financing partnerships routed through Singapore.

6.12 Agriculture & Agribusiness

Singapore's Current Position and Strengths

Singapore is not a conventional agricultural economy; its agriculture strategy is focused on AgriTech, FoodTech, food security and food processing, most visibly through the Singapore Green Plan 2030's "30 by 30" target to produce 30% of Singapore's nutritional needs locally and sustainably by 2030, given that Singapore imports over 90% of its food. Its strengths include a supportive regulatory environment for novel foods and alternative proteins (through the Singapore Food Agency), and leadership in vertical farming and urban agriculture innovation.

Singapore's Challenges

Severe land constraints limit the scale of domestic food production achievable even with intensive AgriTech, keeping Singapore structurally reliant on diversified food imports. This dependence also exposes Singapore to global supply-chain disruptions, price volatility, and food-security risks.

India's Relevant Capabilities and Existing Cooperation

India is a major global agricultural producer and exporter, including of rice, spices, marine products and processed foods, and has a fast-growing AgriTech and FoodTech start-up ecosystem spanning precision agriculture, post-harvest technology and alternative proteins. Existing cooperation is largely trade-based (India as a food supplier); there is meaningful scope to deepen cooperation into AgriTech and FoodTech technology partnerships alongside continued trade.

What CCI India Can Do

CCI India can connect Indian agricultural exporters, Farmer Producer Organisations (FPOs), food processors and AgriTech/FoodTech companies with the Singapore Food Agency and Singapore food importers and retailers.

Proposed CCI India Programmes / Institutions	Detail
Specific Programmes (PROPOSED)	India-Singapore AgriTech & Food Security Forum; structured FPO-to-Singapore-importer matchmaking programme.
Relevant Singapore Institutions	Singapore Food Agency (SFA); Enterprise Singapore.

Horizon	Actions
Short-term	Map Indian FPOs, agri-exporters and AgriTech/FoodTech companies with export or partnership readiness for Singapore.
Medium-term	Launch the India-Singapore AgriTech & Food Security Forum; pilot an FPO-importer matchmaking programme.
Long-term	Support sustained diversified food-supply and AgriTech technology-transfer partnerships.

6.13 Sustainability

Singapore's Current Position and Strengths

Singapore's sustainability agenda is anchored by the Green Plan 2030 and its ambition to be a leading regional hub for green finance, carbon services and sustainability solutions, alongside a domestic decarbonisation pathway targeting net zero by 2050, with natural gas expected to remain over 50% of the energy mix through 2035 and clean electricity imports expected to contribute around 20% of emissions reductions by 2030. Its strengths include deep green-finance capital markets, a functioning carbon tax regime, and an established base of climate-technology and sustainability-solutions companies and investors.

Singapore's Challenges

Singapore's own physical constraints (land, energy, water) mean much of its sustainability strategy depends on regional partnerships for actual emissions abatement and resource diversification, rather than purely domestic solutions.

India's Relevant Capabilities and Existing Cooperation

India has a rapidly scaling climate-technology, water-technology, waste-management and circular-economy sector, alongside a large renewable energy and green hydrogen programme. Cooperation is emerging through the ISMR's sustainability pillar; there remains scope to connect Indian ClimateTech, water-technology and circular-economy companies directly with Singapore's green-finance and carbon-services ecosystem.

What CCI India Can Do

CCI India can connect Indian ClimateTech, water-technology, waste-management and green-finance-ready companies with Singapore's sustainability finance and carbon-services hub. This can facilitate cross-border investment, technology partnerships and the adoption of scalable green solutions across both markets. It can also create new opportunities for joint ventures, pilot projects and regional expansion of sustainable technologies across ASEAN markets.

Proposed CCI India Programmes / Institutions	Detail
Specific Programmes (PROPOSED)	India-Singapore Sustainability & Climate Technology Forum; Green Finance Partnership Desk.
Relevant Singapore Institutions	National Climate Change Secretariat (NCCS); Monetary Authority of Singapore (MAS) (green finance); Economic Development Board (EDB).

Horizon	Actions
Short-term	Map Indian ClimateTech, water-technology and circular-economy companies relevant to Singapore's Green Plan priorities.
Medium-term	Launch the India-Singapore Sustainability & Climate Technology Forum.
Long-term	Support sustained green-finance and carbon-services partnerships between Indian and Singapore-based institutions.

6.14 Semiconductors

Singapore's Current Position and Strengths

Singapore contributes roughly 10% of global semiconductor output, around 20% of global semiconductor equipment production and approximately 5% of global wafer fabrication capacity, with the sector directly contributing an estimated 7% to national GDP in 2024 and employing more than 35,000 professionals; nine of the world's top fifteen semiconductor companies have operations in Singapore. Its strengths include an integrated value chain spanning design, wafer fabrication, advanced packaging and testing (OSAT), a stable power grid, strong IP protection, and deep A*STAR-backed R&D in advanced packaging and AI chips.

Singapore's Challenges

High operating costs, land constraints on further fab expansion, and a persistent need for specialised semiconductor engineering talent constrain Singapore's ability to scale volume manufacturing further.

India's Relevant Capabilities and Existing Cooperation

India has launched a national semiconductor mission and is building fabrication, packaging and design capacity, alongside a very large semiconductor design-engineering talent pool already serving global chip companies. Cooperation to date is at an early, largely company-specific stage; there is significant scope for CCI India to formalise semiconductor talent, investment and supply-chain cooperation between the two ecosystems.

What CCI India Can Do

CCI India can facilitate talent-mobility and joint-venture dialogue between Singapore's semiconductor cluster and India's emerging fabrication and design ecosystem, and support Indian semiconductor design and equipment companies seeking Singapore partnerships.

Proposed CCI India Programmes / Institutions	Detail
Specific Programmes (PROPOSED)	India-Singapore Semiconductor Business Forum; Semiconductor Talent & Technology Partnership Desk.
Relevant Singapore Institutions	Economic Development Board (EDB) Electronics cluster; A*STAR; Singapore Semiconductor Industry Association.

Horizon	Actions
Short-term	Map Indian semiconductor design, ATMP and equipment companies relevant to Singapore's cluster.

Horizon	Actions
Medium-term	Launch the India-Singapore Semiconductor Business Forum; organise an initial delegation.
Long-term	Support joint investment, design-partnership and talent-mobility initiatives at scale.

6.15 Emerging Technologies, Particularly Space Technology

Singapore's Current Position and Strengths

Singapore is building capability across artificial intelligence, quantum technology, cybersecurity, robotics and deep technology, with a particular strategic focus on space technology, formalised through the establishment of the National Space Agency of Singapore (NSAS) on 1 April 2026, led by Chief Executive Ms Ngiam Le Na, succeeding the Office for Space Technology & Industry (OSTIn), which had run a Space Technology Development Programme with S\$210 million in funding since 2022. Its strengths include small-satellite design and manufacturing experience (over 30 Singaporean-made satellites launched since 2011).

Singapore's Challenges

Singapore's small land area rules out conventional rocket launch capability, and its space programme is necessarily focused on satellite technology, downstream data applications and international partnerships rather than launch infrastructure.

India's Relevant Capabilities and Existing Cooperation

India has a mature, globally respected space programme with proven satellite manufacturing, launch and Earth-observation capability through ISRO, and a fast-growing private space-technology sector spanning satellite manufacturing, launch services and space-data analytics.

What CCI India Can Do

CCI India can help establish structured cooperation between NSAS and Indian space agencies/companies covering satellite data applications (maritime, agriculture, climate and disaster management), talent exchange, and commercial space partnerships, alongside broader AI, quantum and cybersecurity cooperation.

Proposed CCI India Programmes / Institutions	Detail
Specific Programmes (PROPOSED)	India-Singapore Space Technology Forum; Emerging Technologies (AI/Quantum/Cybersecurity) Partnership Desk.
Relevant Singapore Institutions	National Space Agency of Singapore (NSAS); DSO National Laboratories; A*STAR; Cyber Security Agency of Singapore.

Proposed CCI India Programmes / Institutions	Detail
Horizon	Actions
Short-term	Establish initial contact with NSAS given its recent formation, and map Indian space-technology companies and ISRO-linked commercial entities with partnership interest.
Medium-term	Launch the India-Singapore Space Technology Forum; pilot a satellite-data application partnership (e.g., agriculture or maritime).
Long-term	Support sustained commercial space, AI and quantum technology cooperation as both ecosystems mature.

7. How CCI India Can Support Singapore

This chapter sets out the core strategic proposition of this paper: CCI India can serve as a strategic economic bridge connecting Singapore's capital, technology, innovation, global business networks and regional connectivity with India's market, manufacturing capacity, talent, infrastructure and growth opportunities. This is a two-way partnership model, not a one-directional "India sells to Singapore" proposition. All programmes, desks and forums referenced below that are not already in operation are PROPOSED CCI INDIA INITIATIVES.

7.1 Market Access

CCI India can help Singapore companies enter the Indian market through market intelligence, business matchmaking, distributor and local-partner identification, joint-venture facilitation, and connections to relevant Indian state investment-promotion agencies.

7.2 Investment Facilitation

CCI India can connect Singapore-based investors, including sovereign and institutional investors with a Singapore base, with investment opportunities across Indian infrastructure, manufacturing, technology, healthcare, semiconductors, energy, aerospace, agriculture and emerging technologies.

7.3 Supply-Chain Diversification

CCI India can help Singapore companies diversify suppliers, manufacturing bases, components, food sources, technology inputs, critical minerals and industrial inputs into India, positioning India as a resilient, scaled alternative within global and regional supply chains.

7.4 Technology Partnerships

CCI India can create structured partnerships between Singapore and Indian companies across AI, FinTech, semiconductors, advanced manufacturing, space technology, sustainability and healthcare, building on the sector-specific forums.

7.5 Skills and Talent

CCI India can support industry training and skills-development cooperation in AI, semiconductors, advanced manufacturing, aerospace, healthcare, cybersecurity and space technology, addressing Singapore's demographic and workforce constraints while creating opportunities for Indian talent and training institutions.

7.6 Food Security

CCI India can connect Singapore with Indian agricultural producers, Farmer Producer Organisations (FPOs), food processors, exporters, AgriTech companies and aquaculture/FoodTech companies, supporting Singapore's "30 by 30" food-resilience agenda alongside continued food trade. This can promote stronger sourcing partnerships, technology transfer and investment across sustainable agriculture and food-processing value chains. It can also facilitate joint ventures in food innovation, cold-chain infrastructure and alternative protein solutions, strengthening long-term food security and market access.

7.7 Sustainability

CCI India can connect Singapore companies and financial institutions with Indian ClimateTech, water-technology, waste-management, clean-energy, green-construction and carbon-solutions companies, supporting Singapore's ambitions as a regional green-finance and carbon-services hub.

7.8 ASEAN Gateway

CCI India can help Indian companies use Singapore as a regional headquarters, investment hub, trading hub, financial hub and ASEAN gateway, building the corridor "India to Singapore to ASEAN" as a strategic business pathway, while equally helping Singapore and ASEAN-based companies use India as an entry point into South Asia.

7.9 Business Delegations

CCI India should organise sector-specific delegations rather than generic trade delegations, each with a defined purpose, participant profile, target sectors and institutions, expected outcomes, and a structured follow-up mechanism. Each delegation should be designed around measurable business outcomes, with clear timelines, responsibilities, and post-visit tracking.

7.10 Policy Dialogue

CCI India can facilitate industry-government dialogue, regulatory discussions, sector policy forums, business roundtables and investment dialogues, complementing the government-to-government ISMR mechanism with sustained, execution-focused industry engagement.

8. Proposed CCI India Initiatives

This chapter consolidates the specific initiatives proposed throughout this paper into a single reference list. All initiatives listed here are proposed cci india initiatives; none should be represented as an existing CCI India programme unless and until formally established and announced by CCI India leadership.

Proposed Initiative	Description
India-Singapore Business Council / Business Forum	Apex bilateral business forum convened by CCI India, bringing together Singapore and Indian business leaders across priority sectors on a recurring basis.
India-Singapore Investment Facilitation Desk	Standing desk within CCI India to support Singapore investors evaluating Indian opportunities and Indian companies seeking Singapore-linked capital.
Singapore Market Entry Desk (for Indian companies)	Advisory desk helping Indian companies establish a Singapore/ASEAN regional presence.
India Market Entry Desk (for Singapore companies)	Advisory desk helping Singapore companies navigate Indian market entry, states, regulation and partners.
India-Singapore Semiconductor Business Forum	Sector forum connecting India's emerging semiconductor ecosystem with Singapore's established cluster.
India-Singapore FinTech Forum	Sector forum for digital payments, digital banking and FinTech cooperation.
India-Singapore AI & Digital Transformation Forum	Sector forum for ICT, AI, cloud and cybersecurity cooperation.
India-Singapore Advanced Manufacturing Forum	Sector forum for manufacturing and Industry 4.0 cooperation.
India-Singapore Healthcare & Pharma Forum	Sector forum for biomedical, healthcare and pharmaceutical cooperation.
India-Singapore Space Technology Forum	Sector forum for cooperation with the newly established National Space Agency of Singapore.

Proposed Initiative	Description
India-Singapore Sustainability & Climate Technology Forum	Sector forum for ClimateTech, water technology and green finance cooperation.
India-Singapore AgriTech & Food Security Forum	Sector forum supporting Singapore's "30 by 30" agenda and Indian agri-exports.
India-Singapore Aerospace & Aviation Forum	Sector forum for MRO, component manufacturing and aerospace talent cooperation.
India-Singapore Energy Dialogue	Sector dialogue on renewable energy, green hydrogen and energy security cooperation.

9. Institutional Stakeholder Map

9.1 Singapore-Side Stakeholders

Institution	Type	Relevance
Ministry of Trade and Industry (MTI)	Government	Overall trade and industry policy; parent ministry of NSAS and Enterprise Singapore
Ministry of Foreign Affairs (MFA)	Government	Diplomatic relations; oversees the High Commission network including the New Delhi mission
Enterprise Singapore	Government Agency	Trade and investment promotion; supports Singapore SMEs' internationalisation, including into India
Economic Development Board (EDB)	Government Agency	Investment promotion into Singapore across manufacturing, technology and biomedical sectors
Monetary Authority of Singapore (MAS)	Regulator/Central Bank	Financial sector regulation; FinTech, green finance and capital markets policy
Singapore Food Agency (SFA)	Government Agency	Food safety, food security and the "30 by 30" AgriTech/FoodTech agenda
National Environment Agency (NEA)	Government Agency	Environmental policy, waste management and climate adaptation
National Space Agency of Singapore (NSAS)	Government Agency	Space technology strategy and industry development, established 1 April 2026
A*STAR	Research Agency	Public research across biomedical sciences, engineering and advanced manufacturing

Institution	Type	Relevance
Singapore Business Federation (SBF)	Business Chamber	Apex national chamber representing Singapore businesses; existing India engagement channel
Singapore Indian Chamber of Commerce & Industry (SICCI)	Business Chamber	Chamber focused specifically on India-related trade and business in Singapore
Civil Aviation Authority of Singapore (CAAS)	Regulator	Aviation sector regulation and policy
Building and Construction Authority (BCA)	Regulator/Agency	Construction standards, Green Mark certification and built-environment policy

9.2 India-Side Stakeholders

Institution	Type	Relevance
Ministry of Commerce and Industry	Government	Overall trade policy; CECA review and bilateral trade negotiations
Ministry of External Affairs (MEA)	Government	Diplomatic relations; oversees the High Commission of India in Singapore
Federation of Indian Chambers of Commerce and Industry (FICCI)	Business Chamber	National chamber with an established role in India-Singapore Parliamentary Forum support
Confederation of Indian Industry (CII)	Business Chamber	National chamber with an established role in the Singapore-India Partnership Foundation
Invest India	Government Agency	National investment promotion agency; natural counterpart to EDB and Enterprise Singapore
State Investment Promotion Agencies	Government Agency	State-level investment facilitation for Singapore investors seeking state-specific opportunities
Ministry of Electronics and Information Technology (MeitY)	Government	India Semiconductor Mission and digital economy policy
Department of Pharmaceuticals	Government	Pharmaceutical sector policy relevant to healthcare/pharma cooperation
Indian Space Research Organisation (ISRO) / IN-SPACe	Government Agency	India's space programme and private space-sector regulation; counterpart to NSAS

Institution	Type	Relevance
CCI India	Chamber	This paper's sponsoring institution; positioned as the execution-focused bridge between the above stakeholders and Singapore

This stakeholder map is deliberately confined to institutions directly relevant to the fifteen priority sectors examined in this paper. Current leadership names for each institution should be verified against official sources immediately prior to any outreach, as government and agency leadership can change. This stakeholder map is deliberately confined to institutions directly relevant to the fifteen priority sectors examined in this paper. The map identifies key government agencies, industry bodies, business networks, and institutional partners relevant to each sector. It is intended to guide targeted outreach, partnership development, and business matchmaking. CCI India can use these institutional linkages to identify sector-specific opportunities and potential collaborators. Regular stakeholder mapping should also be undertaken to reflect new institutions, policy priorities, and emerging areas of cooperation. Current leadership names for each institution should be verified against official sources immediately prior to any outreach, as government and agency leadership can change.

10. Priority Matrix

Opportunities across the fifteen sectors are ranked below by strategic importance to Singapore, ease of implementation for CCI India, and commercial potential, and classified into three tiers: Tier 1 (Immediate Priority), Tier 2 (Medium-Term) and Tier 3 (Long-Term/Emerging).

Sector	Strategic Importance to Singapore	Ease of Implementation	Commercial Potential	Tier
FinTech	High	High	High	Tier 1
ICT / AI / Digital	High	High	High	Tier 1
Semiconductors	High	Medium-High	High	Tier 1
Healthcare & Pharma	High	High	Medium-High	Tier 1
Advanced Manufacturing	High	High	Medium-High	Tier 1
Sustainability & Climate Tech	High	Medium-High	Medium-High	Tier 2
Aerospace & Aviation	Medium-High	Medium	Medium-High	Tier 2

Sector	Strategic Importance to Singapore	Ease of Implementation	Commercial Potential	Tier
Agriculture & Food Security	Medium-High	High	Medium	Tier 2
International Trade	High	High	Medium	Tier 2
Energy	Medium-High	Medium	Medium	Tier 2
Construction & Infrastructure	Medium	Medium-High	Medium	Tier 2
Tourism & Hospitality	Medium	Medium-High	Low-Medium	Tier 2
Emerging Tech / Space	Medium	Medium	High (long-term)	Tier 3
Oil & Gas	Medium	Medium	Low-Medium	Tier 3
Mining & Minerals (trade/finance)	Low-Medium	Medium	Medium (long-term)	Tier 3

13.KPIs and Monitoring Framework

The following KPIs are recommended for CCI India to track the impact of its Singapore engagement programme. Figures are presented as proposed tracking categories rather than fixed numerical targets, which should be set by CCI India leadership once the programme is operational and an initial baseline has been established. The KPIs should be reviewed periodically to measure progress, identify gaps and refine engagement strategies based on emerging opportunities. A structured monitoring framework will also enable greater accountability, transparency and evidence-based decision-making across the programme. The framework should capture both quantitative outputs and qualitative outcomes, including the quality of partnerships, stakeholder satisfaction and strategic value generated. Regular reporting can help CCI India assess long-term economic impact and strengthen future India–Singapore engagement initiatives. Regular reporting can help CCI India assess long-term impact, commercial outcomes, institutional relationships, and the overall effectiveness of its Singapore engagement programme. It can also support timely course correction, strengthen stakeholder confidence, and ensure that resources are directed towards high-impact opportunities. Over time, the accumulated data can provide a clear evidence base for expanding successful initiatives, strengthening bilateral business linkages, and developing new sector-specific programmes.

KPI Category	Tracking Approach
Singapore companies engaged	Proposed target: track cumulative count from Year 1 onward
Indian companies engaged	Proposed target: track cumulative count from Year 1 onward
B2B meetings facilitated	Proposed target: tracked per forum/delegation
Business delegations organised (each direction)	Proposed target: at least 1 per priority sector per year by Year 3
Investment leads generated / facilitated	Proposed target: tracked cumulatively; value disclosed only where verifiable
Trade leads generated	Proposed target: tracked cumulatively
Joint ventures / MoUs signed	Proposed target: tracked cumulatively
Technology / R&D partnerships facilitated	Proposed target: tracked cumulatively, with emphasis on semiconductors and space technology
Government-to-government meetings supported	Proposed target: tracked per year
Sector forums held	Proposed target: all fourteen listed forums operational by end of Year 3
Market-entry projects supported (each direction)	Proposed target: tracked cumulatively via the two Market Entry Desks

Conclusion

CCI India offers Singapore's government agencies and companies an execution-focused, sector-specific partner that complements the existing government-to-government (ISMR) and national-chamber (FICCI/CII/SBF) architecture, converting framework-level dialogue into concrete matchmaking, investment facilitation and delegation outcomes.

A dedicated, responsive institutional bridge combining sector-specific forums, market-entry desks, and a structured stakeholder map spanning both government agencies and companies, purpose-built around the fifteen priority sectors most relevant to both economies' current strategic priorities. India offers Singapore a large and growing market, an expanding manufacturing and technology base, a deep talent pool addressing Singapore's demographic constraints, and a stable, diversification-relevant partner amid global trade fragmentation.

FinTech, ICT/AI/Digital, Semiconductors, Healthcare & Pharma and Advanced Manufacturing are recommended as Tier 1 priorities, given their alignment with the ISMR's expanded pillars and their near-term commercial readiness, with Sustainability, Aerospace & Aviation, Agriculture & Food Security, International Trade, Energy, Construction & Infrastructure and Tourism as Tier 2 priorities to follow. The High Commission of the Republic of Singapore in New Delhi, Enterprise Singapore, the Economic Development Board, and, given its recent establishment, the National Space Agency of Singapore, represent the most valuable first points of institutional contact.

An institutionalised India-Singapore business corridor in which CCI India is recognised by both governments and business communities as the principal execution-focused bridge connecting Singapore's capital, technology and regional connectivity with India's market, manufacturing capacity and talent, particularly in semiconductors, advanced manufacturing, healthcare, sustainability and space technology.

Singapore's search for resilient, scaled, capable partners amid a more fragmented global trading environment, and India's search for capital, technology and a trusted regional gateway into ASEAN, point toward the same conclusion: a deeper, more structured India-Singapore business partnership, with CCI India positioned as its principal institutional bridge. This paper has set out the evidence base, the sector-specific opportunities, and the practical roadmap for CCI India to realise that role.

THANK YOU

CCI India sincerely thanks Your Excellency for the warm hospitality and gracious interaction with our team. We greatly value the opportunity to discuss strengthening India-Singapore bilateral trade and economic relations and look forward to deepening cooperation, expanding business engagement, and creating new avenues for trade, investment, and mutually beneficial partnerships between the two countries.

*Stronger Partnerships,
Shared Prosperity,
Sustainable Progress.*
