## DIRECTOR GENERAL, CHAMBER OF COMMERCE AND INDUSTRIES OF INDIA

## MESSAGE

Reliable and affordable power is fundamental to economic growth, industrial productivity, social development, and improved quality of life. The Ministry of Power plays a central role in strengthening India's electricity sector through generation, transmission, distribution, grid modernization, energy efficiency, and policy reforms that ensure universal access to reliable power while supporting sustainable development.

The Chamber of Commerce and Industries of India (CCI India) recognizes that a resilient power sector is essential for enhancing industrial competitiveness, attracting investments, promoting innovation, and enabling the country's long-term economic aspirations. Through policy advocacy, investment facilitation, technology partnerships, industry engagement, skill development, and innovation-driven collaboration, CCI India remains committed to supporting the Ministry's efforts in building a future-ready energy ecosystem.

This Knowledge Paper presents comprehensive insights into the Ministry's strategic priorities, policy initiatives, infrastructure development, investment opportunities, and emerging technologies across conventional power, renewable energy integration, smart grids, energy storage, transmission modernization, digital utilities, energy efficiency, and power sector reforms. It also identifies collaborative opportunities that can strengthen India's energy resilience and technological capabilities.

The publication serves as a strategic reference for policymakers, utilities, investors, technology providers, infrastructure developers, researchers, academic institutions, entrepreneurs, and development organizations seeking to contribute to India's evolving power sector. Through informed dialogue and strategic partnerships, it aims to promote innovation, improve operational efficiency, strengthen energy security, and support sustainable economic growth.

As India moves towards becoming a global economic powerhouse, a reliable, efficient, and sustainable power sector will remain indispensable. CCI India looks forward to working closely with the Ministry of Power in advancing energy security, technological excellence, and national development.

Munindra Kumar
Director General
CCI India

# PREFACE

India stands at a decisive juncture in its developmental trajectory. The achievement of Viksit Bharat 2047 a fully developed, energy-secure, and economically sovereign nation rests, above all, on the transformation of its power sector. Electricity is not merely a utility; it is the foundational infrastructure upon which every dimension of national progress is built. From the competitiveness of Indian manufacturing to the viability of digital public infrastructure, from the livelihoods of 900 million rural citizens to the ambitions of a new generation of entrepreneurs all converge at the point of reliable, affordable, and clean power supply.

The Ministry of Power, Government of India, carries one of the most consequential mandates in the Union Cabinet: the governance, regulation, reform, and expansion of a power system that must simultaneously serve 1.4 billion people, decarbonise at scale, attract private capital, and modernise its operational DNA. With India's electricity demand projected to triple by 2047 and the nation having committed to achieving 500 GW of non-fossil fuel capacity by 2030, the policy and institutional architecture governing the sector must evolve with commensurate urgency and sophistication.

This Knowledge Paper has been prepared by the Chamber of Commerce and Industry of India (CCI India) to serve as a strategic document for engagement with the Ministry of Power and its institutional ecosystem. It is not a descriptive overview of the Ministry's functions. Rather, it is an analytical instrument designed to map the sector's structural landscape, identify execution and ecosystem gaps, assess investment and innovation opportunities, and propose a concrete framework through which CCI India can serve as a catalytic partner to the Ministry's agenda.

The paper is structured to be of direct value to senior decision-makers: Union Ministers, Secretaries to the Government of India, Members of NITI Aayog, senior bureaucrats, institutional investors, development finance institutions, and multilateral agencies. It combines policy analysis with strategic intelligence, sector benchmarking with actionable programming, and institutional assessment with a forward-looking collaboration architecture.

CCI India's vision for this engagement is rooted in a conviction that industry bodies, when operating at the frontier of policy intelligence, network capital, and programmatic capacity, can serve a role that no government agency or consulting firm can replicate in isolation. We bring to this partnership a nationwide institutional presence, a curated industry membership across energy and infrastructure sectors, a structured relationship with investor and development finance communities, and a demonstrated capability in knowledge production, capacity building, and policy facilitation.

It is our considered view that the Ministry of Power represents one of the most strategically significant collaboration opportunities for CCI India in the current policy cycle and that the depth of transformation underway in this sector demands the kind of sustained, institutionalised partnership that this paper proposes.

# About CCI India

CCI India (The Chamber of Commerce and Industry of India) is a premier national business chamber dedicated to fostering economic growth, industry development, entrepreneurship, innovation, and investment promotion across India. As the voice of Indian business and industry, CCI India serves as a bridge between government, industry, startups, academia, investors, and civil society, facilitating meaningful collaboration for nation-building and sustainable development.

Through policy advocacy, business facilitation, research, stakeholder engagement, capacity building, and strategic partnerships, CCI India works to create an enabling environment for enterprises of all sizes. The Chamber actively supports key national initiatives such as Startup India, Make in India, Digital India, Atmanirbhar Bharat, Skill India, and Viksit Bharat 2047 by connecting innovative enterprises with government opportunities and promoting inclusive economic development.

CCI India operates through sector-specific councils, industry forums, knowledge platforms, and state-level engagements that address emerging opportunities and challenges across sectors including manufacturing, agriculture, technology, healthcare, education, infrastructure, sustainability, MSMEs, and startups. The Chamber regularly organizes policy dialogues, investment summits, business delegations, workshops, conferences, and knowledge-sharing initiatives to strengthen India's economic ecosystem.

With a strong commitment to innovation, entrepreneurship, and public-private collaboration, CCI India strives to empower enterprises, facilitate investment, enhance competitiveness, and contribute to India's journey toward becoming a globally competitive and economically resilient nation. Its role as a knowledge partner and industry catalyst enables ministries, departments, state governments, startups, and businesses to collaborate effectively in achieving national development objectives.

# Section 1: Introduction to the Ministry of Power

## 1.1 Constitutional and Statutory Mandate

Electricity is a Concurrent List subject under Entry 38 of the Seventh Schedule of the Constitution of India, allowing both Parliament and State Legislatures to legislate on the matter. The Ministry of Power (MoP) operates as the apex nodal authority of the Union Government for all matters pertaining to the power sector, exercising jurisdiction under the Electricity Act, 2003 the foundational statute that restructured India's electricity governance from a monolithic, state-controlled framework to a liberalised, competitive, and consumer-responsive system. The Ministry's constitutional relevance is thus both substantive and structural: it governs a sector where legislative competence is shared but where national standards, regulatory architecture, inter-state transmission, and central generation must be coordinated at the Union level.

The Ministry's statutory responsibilities span the full value chain of the electricity sector from policy formulation and legislative oversight, to the governance of central public sector undertakings (CPSUs), to the supervision of the Central Electricity Authority (CEA) and the Appellate Tribunal for Electricity (APTEL). Through the National Electricity Policy, the Tariff Policy, and the National Electricity Plan, the Ministry sets the strategic direction for the sector's investment priorities, technology choices, and service delivery frameworks across all 36 States and Union Territories.

## 1.2 Governance Architecture and Institutional Role

The Ministry of Power operates through a multi-layered institutional ecosystem comprising its core secretariat, attached offices, statutory bodies, and a family of Central Public Sector Enterprises (CPSEs) that collectively represent some of India's largest infrastructure organisations. The Central Electricity Authority (CEA), a statutory body under the Electricity Act, provides technical advice and maintains the National Electricity Plan, which is the sector's master planning document for capacity addition, transmission expansion, and fuel linkages. The CEA's technical determinations shape investment decisions worth hundreds of thousands of crore rupees over successive plan periods.

The Ministry also oversees the Bureau of Energy Efficiency (BEE), which is responsible for demand-side management, energy efficiency standards (the ECBC and BEE Star Rating programmes), and the design and administration of market mechanisms such as the Perform, Achieve and Trade (PAT) scheme. BEE's mandate has acquired renewed strategic importance as India's industrial decarbonisation agenda intensifies and as energy efficiency gains emerge as the most cost-effective near-term pathway to reducing carbon intensity.

## 1.3 National Significance

The power sector is India's single largest infrastructure system by asset base and by the breadth of its economic and social impact. India is the third-largest electricity producer and consumer in the world, with an installed generation capacity exceeding 442 GW as of early 2025. The sector accounts for approximately 2.5% of GDP directly and supports virtually every productive sector of the economy. The achievement of Universal Household Electrification under the Pradhan Mantri Sahaj Bijli Har Ghar Yojana Saubhagya scheme represents one of the most significant social infrastructure accomplishments in India's recent history, with over 28 million previously unelectrified households connected to the grid between 2017 and 2019.
